Samsung find your flow

Samsung Climate Solutions is constantly innovating to meet the rapidly evolving needs of our partners and customers alike. While doing so, we are dedicated to satisfying your needs and fulfilling our responsibility towards society and planet, both in the way we work and climate solutions we offer, so that we can continually enhance the world around you.

Brand Value

A name that you can really trust

Samsung is one of the most recognized brand and household names. Our services and presence span over kitchen appliances, TV and mobile phones.

Global Citizenship

We have always been there for you

Our aim is to empower future generations to achieve their potential and pioneer positive social change, while pursuing innovations that improve the world.

Samsung Silicon Valley Office, San Jose, CA, USA

Innovation Leadership

Relentlessly innovating the things around you

We provide a wide variety of climate solutions that enhance many aspects of your daily life. And they are continually evolving to suit your changing needs.

Please visit the Samsung sustainability website
(www.samsung.com/sustainability) for more detailed information.

Product overview

Mono

The EHS Mono can connect to a Tank Integrated Hydro Unit (ClimateHub) that includes most hydraulic components and is already equipped with a Domestic Hot Water (DHW) tank. In alternative, it can connect to a third party Domestic Hot Water (DHW) tank thanks to the the Wall-Mounted Hydro Unit that includes all hydraulic components or to the Control kit which includes a controller, flow sensor, DHW sensor and leaving and return water sensors. The EHS Mono with Pump already has an integrated pump, WI-FI Kit and Control Kit. For the Mono R290 with Pump, indoor units are not required except for a DHW tank.

Split

The EHS Split can connect to a Tank Integrated Hydro Unit (ClimateHub) that includes all hydraulic components and is already equipped with a Domestic Hot Water (DHW) tank. In alternative, it can connect to a third party Domestic Hot Water (DHW) tank thanks to the the Wall-Mounted Hydro Unit that includes all hydraulic components.

TDM Plus

The TDM Plus system is an 'All-In-One' Air-to-Water (A2W) and Air-to-Air (A2A) system for a complete home climate solution. The EHS TDM Plus outdoor unit can connect to a Tank Integrated Hydro Unit (ClimateHub) that includes all hydraulic components and is already equipped with a Domestic Hot Water (DHW) tank. In alternative, it can connect to a third party Domestic Hot Water (DHW) tank thanks to the the Wall-Mounted Hydro Unit that includes all hydraulic components.

The selection of the exact product is subject to specific application conditions. Solar panels, underfloor heating panels, radiators and non-integrated components are not provided by Samsung unless specified otherwise. For more detailed product information and technical specifications, please consult the respective product pages of this Product Catalogue.

Product overview

VRF (DVM)

A Samsung VRF air conditioning system offers high installation flexibility with DVM S Eco and DVM S2 platform outdoor units, which can connect up to 64 indoor units. The system is ideal for multi-family buildings and central heating solutions when installed together with DVM Hydro High Temperature/High Efficiency units that caters to various consumer requirements like cooling, heating or hot water as needed.

Corporate and Technology milestones that make us proud

1974

Samsung introduces its first air conditioner.

2005

Samsung Electronics enters the European market for commercial air conditioning.

2014

Arrival of the Samsung TDM concept, an all-in-one heat pump solution for heating, cooling and domestic hot water supply.

2015

Introduction of the Samsung 360 Cassette, the world's first circular air conditioner that fits seamlessly into the design of any space.

Our market-centric product ranges

Home	Apartments	Hotel	Retail	Office	Education	Restaurant	
RAC FJM	RAC FJM DVM						Residential
CAC FJM	CAC FJM DVM	CAC					Light Commercial
		DVM HVM ERV				DVM	Commercial
EHS							Heating
Controls							Controls

2017

Samsung Electronics opens Samsung Electronics Air Conditioner Europe B.V. (SEACE) in Amsterdam.

Samsung WindFree™ technology comes onto the market, gently and evenly dispersing fresh air through thousands of micro-holes to limit cold drafts.

2021

Samsung launches the sixth generation of its Digital Variable Multi the DVM S2 equipped with AI technology, enhanced energy efficiency performance, easier installation and serviceability.

2022

Samsung introduces its EHS Mono High Temperature (HT) Quiet with the aim to service the growing home renovations market and expand the offer for new buildings. Its aesthetic design won us the iF Design Awards 2023.

2023

Revolutionise Home Heating with new EHS Mono heat pump featuring R290.

2024

Samsung introduces the new EHS ClimateHub & Hydro Unit: slim-fit heating and hot water solutions for the home.

Our European footprint with the locations from which we operate

Highlights

Unveiling our new EHS ClimateHub & Hydro Unit

**All homes need a reliable solution for heating and domestic hot water.
Our three new indoor units provide that – and more.**

The new **EHS ClimateHub** is an all-in-one integrated solution for heating and domestic hot water. It is our most complete option, with a compact design that makes it a perfect fit for almost any home. Installation is easy, even in one day: evolution of the original ClimateHub design means that the major field installation parts are now built into the hub to reduce time and effort needed during installation, maintenance and servicing.

Magnetic filters, 3-way valves, and an expansion vessel are also standard. Improved defrost operating logic ensures that the water used for defrosting does not interfere with the heating function. The wider heating control range reduces the Thermo off time and improves overall efficiency and dependability, without the need for a buffer tank. A detachable AI Home 7-inch touch display for user-friendly monitoring and control is included. When connected to the SmartThings app¹, users can efficiently manage their energy usage.

If you have an existing domestic hot water tank or want the flexibility to choose a third-party tank for your installation, the new **EHS Hydro Unit** is a good alternative to the EHS ClimateHub. It is a compact solution for heating and domestic hot water, for use in combination with a third-party tank. Like the ClimateHub, it offers a slim fit design, is easy to install and easy to service. All major field installation parts are built into the unit. The Hydro Unit also has a detachable AI Home 7-inch touch display for user-friendly monitoring and control. When connected to the home's PV system and other devices via Samsung's SmartThings app¹, it enables users to efficiently manage and monitor their energy usage.

If you require even more flexibility, our new **Control Kit** is the option for you. It enables you to manage the hydraulic installation and domestic hot water tank separately. The Control Kit is an excellent choice if the hydraulic circuit and tank are already present in a home.

Easy installation

The integrated design of the new ClimateHub - with most necessary hydraulic components inside the unit - allows for easy installation, even in one day. It has an integrated expansion vessel. The Hydro Unit, on the other hand, allows for easy installation in combination with a third-party tank. Both the ClimateHub and Hydro Unit have improved defrost operating logic. This ensures that the water used for defrosting does not interfere with the heating function. The wider heating control range reduces the Thermo off time and improves overall efficiency and dependability. Magnetic filters and 3-way valves are standard. The 2-zone models² produce two zones without any additional equipment. As you can adjust the Field Setting Values on the Home Appliance Smart Service App³ or EHS Cloud Service instead of using an SD card, this saves time servicing, too.

¹ Available on Android and iOS devices. A Wi-Fi connection and Samsung account are required.

² Available in both the ClimateHub and Hydro Unit. The 2-Zone model is equipped with a circulation pump, mixing valve and temperature sensor, which are not included in the Standard model. By adding a 3kW backup heater (MHC-300FP), which supports both single and 3 phases, you can create an electric heater that delivers up to 9kW, to provide reliable heating in extremely cold areas. The MHC-300HP is sold separately.

³ HASS App available in December 2024. HASS App needs to be connected (via USB or wireless) to the appliance to adjust settings. HASS App and EHS Cloud Service are subject to further terms and conditions.

Discover the efficiency of the heat pump featuring R290

The EHS Mono R290 offers a new home solution for residential homes. The EHS Mono R290 uses R290 as its refrigerant. R290 has a much lower Global Warming Potential (GWP) of only 3 when compared to other refrigerants R32 and R410A. According to the new EU F-Gas regulations, refrigerants must not exceed 150 GWP from 2025.

The EHS Mono R290 is available in a broader range of capacities fitting with varying project requirements – 5, 8, 12, and 16 kW. The 5 and 8 kW units are only 850mm in height, compared to the larger 12 and 16 kW units which measure approximately 1000mm. It complements any outdoor living space with its sleek and compact design.

Easy installation and servicing

The outdoor unit of the EHS Mono R290 is designed to be simple to install and maintain. The heat pump's internal parts are easily accessible via the side panel which can be removed simply by undoing 3 screws. This significantly saves time and effort during the installation as well as the servicing process.

Higher hot water temperature

Many older houses in Europe are still using radiators which require a hot water temperature of 65°C or higher to heat rooms effectively. The new EHS Mono R290 combines advanced features to consistently provide hot water of up to 75°C¹ for domestic heating purposes. This makes it a suitable heating system replacement in older residential spaces that have been previously dependent on gas boilers for their heating needs. Additionally it can supply domestic hot water of up to 70°C² when the outdoor temperature is as low as -10°C without using the booster heater.

¹ Leaving water temperature when the outdoor temperature is -10–35°C. Results may vary depending on the actual usage conditions.

² Domestic hot water (DHW) leaving the DHW tank is 70°C when the outdoor temperature is -10–43°C. If the outdoor temperature is lower than -10°C, a boost heater is required. Results may vary depending on the actual usage conditions.

Quiet operation

Powered by a combination of innovative noise reducing technologies, the EHS Mono R290 operates quietly with noise levels as low as 35 d(BA)³ using a 4-step Quiet Mode. This heat pump's outdoor unit features a double-layered, sound insulation system fitted with a patented Groove Grid Felt design⁴, which effectively blocks and absorbs noise produced by compression parts and vibrations.

³ Based on internal testing of the EHS Mono R290 outdoor unit. The noise level is measured 3m away from the front of the outdoor unit, in an anechoic room with an outside temperature of 7°C. Results may vary depending on environmental factors and individual use.

⁴ Patent No.: P2022-0012826

The EHS Cascade controller

Improved efficiency with the new solution

The EHS Cascade solution¹ is designed to enhance the performance of multiple heat pumps operating simultaneously to maximize system efficiency. With the capacity to control up to 8 EHS² units, the system provides increased flexibility, allowing seamless adaption to both heating and DHW (Domestic Hot Water) demands.

The EHS Cascade Controller continuously monitors the hot water demand and adjusts the operation of the units accordingly. The EHS Cascade Controller ensures that the correct number of units are running based on current needs, preventing under use or overloading.

The EHS Cascade Controller starts the unit with the lowest runtime, and stops the unit with the highest. By starting units with lower runtime and stopping those with higher runtime, the cascade controller helps balance usage and optimize efficiency across the system by keeping the units at their high-performance range.

With a capacity of up to 128 kW (using 8 units of 16 kW each), the EHS Cascade Controller offers a system with solutions for heating, cooling and DHW, while also being able to control two independent heating zones. Additionally, it can integrate with other heat sources like backup boilers and PV systems (solar panels). Enabling hybrid operation for best energy use.

The Cascade Controller supports Modbus for seamless integration with other control systems. And it is compatible with EHS Cloud³ and SmartThings⁴ on firmware version '25.1Q.

¹ [Support EHS Line-up]: 1. R32 Mono HT Quiet + Control KIT; 2. R290 Mono + Control KIT; 3. R290 Mono with Pump; 4. R32 Mono + Control KIT.

² ClimateHub and Hydro-unit are not supported.

³ Wi-Fi connection and Samsung SmartThings application account are required. Wi-Fi Kit to be ordered separately. Requires iOS 10.0 or later & Android 5.0 or later.

⁴ EHS Cloud Service is available for compatible Samsung products only, further terms and conditions apply. A separate Wi-Fi kit may be required for the EHS unit.

EHS Split R32

High capacity meets optimal flexibility

Every home is different. The new EHS Split R32 enables you to create a heating and domestic hot water solution that is tailored to specific requirements. It's also easy to install, offers high capacity and uses less energy compared to R410A¹ – what more could you ask for?

The R32 EHS Split range offers optimal flexibility: just connect the outdoor unit to a wall-mounted Hydro Unit and then combine it with a third party Domestic Hot Water (DHW) tank of your choice. The resulting solutions offers production of domestic hot water, underfloor heating/cooling, and heating of radiators.

The new heating system uses R32 refrigerant. R32 has a lower Global Warming Potential (GWP) compared to traditional R410A refrigerants¹. The system also requires less refrigerant than existing ones. Its low refrigerant charge means that there is no need for additional safety measures², making installation and operation safer and more straightforward.

Besides flexibility and easy installation, the EHS Split R32 also offers high performance in all seasons. When the outside temperature drops to -10°C, it still provides domestic hot water of up to 65°C – ten degrees higher than the heating systems with R410A refrigerants⁴. It also performs well in even colder conditions, as it can generate domestic hot water of up to 40°C at a maximum outside temperatures of -25°C. The system provides reliable heating at all temperatures, too, thanks to a redesign of key parts. Thanks to this, the EHS Split R32 also uses less energy⁵ – a welcome added bonus.

¹ GWP rating: R32 refrigerant = 675 vs. R410A refrigerant = 2,088.

² The Samsung high capacity EHS Split (R32) only requires 62% of the refrigerant used in a conventional heating system (R410A) of the same capacity. The level of CO₂ emissions of the range is 80% less than what is produced by a conventional heating system.

³ For charges below 1.84 kg, IEC 60335-2-40:2018 and EN 378-1:2016 do not establish any minimum floor area restriction.

⁴ In normal operation, the heat pump is able to generate up to 55°C. However, it's able to reach even 70°C at an outside temperature of -25°C with the use of a booster heater.

⁵ The high capacity EHS Split R32 has a Seasonal Coefficient of Performance (SCOP) rating of A++ for LWT 55°C, so it is more efficient than a conventional EHS Split R410A with an A+ rating. Based on internal testing in accordance with EN14825 on a 12.5kW model (AE125DXEDEG/EU), compared to a conventional model (AE120AXEDEH/EU) when generating domestic hot water at 55°C at an outdoor temperature of 7°C. Results may vary depending on the system configuration and actual usage conditions.

New generation wireless smart home automation

SmartThings is one of the largest open ecosystems of connected devices worldwide and is available on both Android and iOS. It is compatible with the leading voice assistants and a wide range of different brand devices, giving control over smart devices in one place.

With the SmartThings App, much more can be done than just turning devices on and off. The App makes it possible for devices from Samsung and other brands to work together easily at fixed times by creating "Automations" or "Scenes". Additionally, the Geo-Fencing functionality allows the room temperature to be automatically set at the desired level when the user approaches within a preset distance.

A wide range of smart devices can be managed

With the help of the SmartThings Hub a wide range of devices can be integrated into the ecosystem, manageable with a single app, through Zigbee, Z-Wave and Matter, by Bluetooth and Wi-Fi connection. This all requires SmartThings hub 3.0. The user can receive security

notifications, detect water leaks, or schedule lights to come on with SmartThings sensors and plugs. In this way, it is possible to create scenarios and automations by transforming the house into a smart home with simple gestures and without structural interventions.

SmartThings Hub

This is the brain of the Samsung home automation: It communicates with all devices that can be managed via the app and allows for management via SmartThings. Compatible with voice assistants like Bixby¹, Google Home¹ and Amazon Alexa¹.

Compatible with:

¹ Voice control is supported by AI speakers such as Samsung Bixby 2.0, Google Assistant (Google Home) and Amazon Alexa. Google Assistant is not available in certain languages and countries. Google is a trademark of Google LLC.

SmartThings button

The button can be positioned at any point of the house, allowing to activate any smart device connected to it, depending on the set mode.

SmartThings Water Leak sensor

Place this sensor near the ClimateHub water tank, shower and or pipes to detect any water leaks or condensation. This can help to quickly identify leakage when they occur.

SmartThings Motion sensor

Allows to set automatic lighting and other devices when it detects movement. When away from home, the Motion sensor can send an alarm signal to the Smart Phone if it detects unwanted movements.

SmartThings Multipurpose sensor

Easily installable on doors and windows, it recognizes their opening thanks to a magnetic sensor. By using the multi purpose sensor you can reduce energy waste as the air conditioner or EHS will be turned off when the window is open.

Contact your local Samsung Representative for more information on SmartThings.

Just walk into your home, and comfort welcomes you

Home Automation with Geofencing functionality

The Samsung EHS will operate in your preferred mode according to the settings you choose. The geofencing functionality will be automatically activated within a pre-set distance of the building so pre-heating/cooling will start.

Energy efficiency and savings with SmartThings

The automatic room temperature mode is a standard feature in SmartThings Energy that increases the set point of the EHS system during a period of surplus solar energy. In this way, the Samsung EHS system pre-heats the fabric or DHW of the building when there is an excess of solar energy. As the building gradually releases the warmth, less additional heating is required during the evening. This pre-heating leads to a reduction in energy consumption because during periods of high solar production, the coefficient of performance (COP) of the heat pump is also higher due to warmer ambient temperatures which means lower electrical energy is needed for the same heating output.

The daily effect of the pre-heating is almost negligible and unnoticeable, but incrementally, throughout the heating season each kWh every day leads to a reduction of the annual electricity input to the Samsung EHS system of up to 26%¹.

8kW EHS R290 Mono Electricity Savings in % using PV & STE²

¹ This data is the outcome of 11% (EHS + PV Automatic Room Temperature mode) and 15% (additional AI energy mode).

² The graphic represents data from internally modeled testing with the Samsung 8kW EHS Mono R290 outdoor unit with 260L ClimateHub (CNW Model), modelled with the 5kWp PV system.

The most dynamic Home Energy Management System

With SmartThings energy, Samsung devices can be switched to run on lower energy consumption with minimal impact on functionality. It also allows the user to monitor monthly energy usage.

Furthermore solar systems from partners* can be connected to SmartThings energy and Samsung devices can benefit from this connection. SmartThings energy increases the degree of self consumption thus creating dual benefits: decrease energy bill and accelerate the payback of your solar system.

* At the moment, compatible solar systems are from SMA and QCells.

Intuitive Energy Insights

Wide Device Portfolio

Leading IoT Platform

Smart Home using SmartThings Energy

SmartThings Energy recommends ways for you to be more energy efficient and lets you easily monitor and manage the energy usage of your Samsung appliances and other devices connected to the SmartThings App¹ via the Wi-Fi network.

SmartThings Energy enables you to:

- Monitor energy usage²
- Manage monthly costs²

¹ Available on Android and iOS devices. A Wi-Fi connection, Samsung account and an optional Wi-Fi Kit (MIM-H04N) are required.

² The SmartThings AI Energy mode, when used by the end-user, can provide users with a possibility to save energy and/or costs with regard to their domestic hot water usage based on (repeatable) user patterns. A compatible Samsung ClimateHub is required. All savings are estimates. The actual savings vary and depend on, amongst others, usage, costs and operating conditions. The AI Energy mode may impact the product performance. End user may deactivate the AI Energy mode at any time.

Tangibly shows the energy usage and estimated cost for all connected devices².

² Home Appliances, HVAC and TV.

Analysis

Provides analytic reports for hourly and daily usage patterns, which helps you save more.

Notification

Tracks your use of energy and notifies you to be always aware of it.

Warning alert when exceeding

Daily alert by appliance

Maximized use of solar energy

Total/Grid Usage

Track electricity usage and estimated cost. Home energy monitoring is available considering self-generation through PV and ESS.

Photovoltaic and Energy Storage System

Monitor your solar energy production and storage.

The automatic room temperature mode can be activated via the save tab in SmartThings Energy. This mode can be activated for a Samsung EHS system with a compatible solar system from SMA or QCells. When this mode is activated, the set-point temperature is automatically adjusted according to the surplus of solar energy locally produced. If there is a surplus, the set point of the EHS is either increased (to heat) or reduced (to cool) by 2 degrees. In case DHW is also selected, the ClimateHub target set-point will be set to its maximum value (as per filed setting value).

Smart Home Integration

Create a Smart Home with Photovoltaic, Energy Storage system, devices and IoT integrated with SmartThings Energy.

Comfort, elegance, and connectivity

Constructor Marella Group was looking for a single solution for heating, cooling, and domestic hot water production for Residenze Vivaldi. In such a prestigious context, it was also important that the climate solutions balanced design with a

high degree of comfort and practicality, while being efficient and connected, too. Last but not least, Marella Group wanted to offer residents optimal ease of use and the opportunity to create and maintain a comfortable climate for their homes.

Claudio Bonfanti

Engineer for Marella Group

EHS TDM Plus

WindFree™

ClimateHub

Samsung reference projects in the spotlight | Residential building project, Italy

Studio Effe, the designer of the project, decided to use Samsung solutions because they are a perfect match with the concept: products and systems that pair innovation with design, to reach the highest standards and meet professionals' and end users' needs. Samsung's objective was to provide maximum comfort with a versatile and efficient solution that also harmonizes with the refined design of the building. Working together with Studio Effe, who was responsible for the thermo-technical design, a combination of three solutions was selected: the EHS TDM Plus heat pump with WindFree™ air conditioning and the ClimateHub.

The great benefit of the EHS TDM Plus is that it is a single solution for heating, cooling, and domestic hot water production with a single outdoor unit. It also allows for the connection of direct expansion indoor units. In Residenze Vivaldi, the EHS TDM Plus is combined with air conditioning units equipped with the unique and patented WindFree™ technology, which allows cooling without cold drafts and low noise¹ levels.

¹ Based on internal testing compared to a conventional Samsung EHS outdoor unit. 35 dB(A) using a 4-step Quiet Mode. The noise level is measured 3m away from the front of the outdoor unit, in an anechoic room with an outside temperature of 7°C. Results may vary depending on environmental factors and individual use.

The ClimateHub was easily integrated into the prestigious context, thanks to its compact and elegant design: as it is a water tank and hydro unit in one, it enabled the team to use the space efficiently and offered easier installation as well.

Moreover, the Samsung products selected deliver the comfort of connectivity. Thanks to the integrated Wi-Fi, end users can control and monitor their heating and cooling devices directly from their smartphones using the SmartThings app.

Regulations

Samsung is committed to delivering innovative products and technology that enhance customer experiences while adhering to relevant regulations. Our ongoing research and development efforts span across all phases of product development, from design and production to distribution, use and disposal.

Ecodesign and Energy Labelling Regulation

Space heaters, combination heaters, packages of space / combination heater, temperature control and solar device are subject to Energy labelling Regulation (EU) 811/2013 and Ecodesign Regulation (EU) 813/2013.

Since 2019, the energy label for space and combination heaters have ranged from A+++ to D, with A+++ being the most efficient class. The energy label for water heating of combination heaters range from A+ to F, with A+ being the most efficient. In the coming years, new energy labels are

expected to be introduced, aiming to gradually replace the current energy classes (A+, A++ and A+++) with a simpler scale ranging from A (most efficient) to G (least efficient).

In order to help consumers choose products which are the most energy efficient, the energy labels have to contain minimum information about the product. This information ranges from the supplier's name, model code, energy efficiency classes, sound power levels to the rated heat output of the product.

Format of energy labels

F-Gas regulation

Since March 2024, the new F-gas Regulation (EU) 2024/573 has taken effect. The F-gas Regulation aims to control the emissions of F-gases used as refrigerants to reduce their impact on global warming. The revision brings new rules, including future bans on certain types of F-gases in products and a quota system to limit the total amount of F-gases placed on the market in Europe. Due to these changes, the industry will invest the coming years in new technologies to use refrigerants with lower Global Warming Potential (GWP) and in some applications use only non-fluorinated refrigerants. Samsung is contributing to the

transition towards lower GWP refrigerants, such as R290, and will continue to invest in alternatives.

From 2025 onwards, the phase-down of F-gas quota will speed up, gradually reducing the amount that can be used in applications in Europe. By 2050, there will be no F-gas quota to place new products on the market, resulting in a complete phase-out of such refrigerants for new installations. In parallel, products bans will start from 2025 and 2027 for split and monoblock heat pumps and air conditioning systems.

Refrigerants

The R290 natural refrigerant helps conserve the ozone layer and has a low impact on global warming. It has an Ozone Depletion Potential (ODP) of zero and a low Global Warming Potential (GWP) of 3, which is much less than conventional R32 or R410a refrigerants¹. While refrigerants are an essential part of today's air conditioners, R290 would have up to 99 % lower environmental impact than R32 and R410A, if leaked into the atmosphere. It has an Ozone Depletion Potential (ODP) of zero, a high refrigeration capacity and a high thermal conductivity; meaning a high efficiency and a reduction in charging volume.

¹ Comparison between R410A and R32 GWP. Source: European Commission.

WEEE: Electronic Waste

Samsung adheres to the WEEE (Waste Electrical and Electronic Equipment) Directive. This Directive applies to the principles of extended producer responsibility. It stipulates the safe collection, treatment, recycling and environmentally sound disposal of all electrical and electronic equipment. By working with collective recycling schemes in each EU member state Samsung co-finances the take-back and recycling of electronic products.

Batteries

Samsung has been giving new life to used batteries by funding collection, treatment and recycling by local battery recycling organisations.

Packaging

Samsung works together with recycling schemes and governmental organisations to collect, separate and recycle all packaging materials at various points in the distribution chain. Many materials can be recycled into new products and recycling helps to save natural resources. Recycling packaging helps to reuse valuable raw materials and to reduce the overall impact on the environment.

Certifications

Heat Pump KEYMARK Certificate

The Heat Pump KEYMARK is a voluntary, independent, European certification mark (ISO type 5 certification) for all heat pumps, combination heat pumps and hot water heaters (as covered by Ecodesign, EU Regulation 813/2013 and 814/2013). It is based on independent, third-party testing and demonstrates compliance with product requirements as set in the Heat Pump KEYMARK scheme rules and with efficiency requirements as set by Ecodesign. It is aimed at certifying the product performances declared by the manufacturers. The Heat Pump KEYMARK scheme is owned by the European Committee for standardization (CEN). The certificates are granted by independent certification bodies to products fulfilling all requirements of the scheme.

Samsung's EHS and the ClimateHub range are certified with a Heat Pump KEYMARK. This certification is recognised in a number of European countries which include France, Germany, the United Kingdom, Slovakia and Czech Republic. To check the ongoing validity of the KEYMARK certified products from Samsung, please visit: www.keymark.eu

Eurovent Certificate

Eurovent is globally known for its quality mark 'Eurovent Certified Performance' which certifies performance ratings of air-conditioning and refrigeration products according to European and international standards. The 'Eurovent Certified Performance' mark indicates that the prescribed quality requirement has been fulfilled and should not require the need to be proven after the customer's decision and after the manufacturer's production process. Eurovent is an accredited third-party certification body. It builds customer confidence by leveling the competitive playing field for all manufacturers and by increasing the integrity and accuracy of the industrial performance ratings. Thus providing trustworthy services to the entire ecosystem.

Samsung air conditioning products ranging from the Residential Air-Conditioning (RAC), Multi Split (FJM), Commercial Air Conditioning (CAC), Digital Variable Multi S (DVM S) and EHS line-up in the 'Air-to-Water' (A2W) heat pump category are all Eurovent certified. To check the ongoing validity of the Eurovent certified products from Samsung, please visit: www.eurovent-certification.com

Heating solutions

EHS

The Samsung EHS includes a range of advanced functions that help optimize energy usage and are independently certified as delivering enhanced energy efficiency as compared to the previous models.

Various Functions for Energy Saving

The 2-Zone Control enables simultaneous heating with two different water temperature demand. The Photovoltaic Enabled feature checks the status of solar panels and adjusts the temperature to reduce network electricity usage. While the Smart Grid Ready feature helps users take advantage of economically efficient and sustainable power supply options.

Energy Saving
Smart Grid Ready

Energy Saving
Photovoltaic Enabled

Combined A/A - A/W operation range with TDM Plus

EHS Wall-mounted hydro units can discharge cold and hot water from 5 to 55 °C (leaving water temperature), and the ClimateHub (Tank Integrated Hydro Unit) can store up to 70°C of water (due to booster heater operation). EHS TDM Plus Air-to-Air indoor units provide you with a quick individual heating of -25 to 24°C and cooling 10 to 46°C for each room, as well as Air-to-Water heating of -25 to 35°C and cooling 10 to 43°C. For EHS Mono & EHS Split with R32 refrigerant there is a higher Leaving Water Temperature (LWT) and with the EHS Mono HT Quiet there is a higher Leaving Water Temperature (LWT) at even lower ambient.

Air-to-Air Operation range

Durafin™ Ultra

The Samsung EHS outdoor unit's Durafin™ Ultra has an anti-corrosive layer of epoxy acrylic and a hydrophilic layer of acrylic resin that disperses water and reinforces its corrosion-resistance. Its improved quality was proven using the Salt Spray Test (SST) over a period of 2,280 hours¹ with no leakage of refrigerant².

¹ Based on testing by a third party lab in accordance with ASTM B117, an official test method. For more details, please contact Samsung's technical professionals.
² Based on testing by a third party lab, applying the actual pressure of refrigerant for 1 minute, after a Salt Spray Test (SST) of over 2,280 hours.

Raw Aluminum Material

Digital Inverter Technology

Unlike conventional fixed-speed compressors, which frequently shut off and switch on, the compressor automatically adjusts its speed in response to changes in the surrounding room temperature. So it helps to ensure optimum comfort by maintaining the desired temperature with little fluctuation. Additionally, the digital inverter technology optimizes power usage which reduces energy consumption.

For Mono and Split, please contact your direct Samsung representative.

Anti-Freeze protection control

The Samsung EHS unit which provides the indoors with heating energy is installed outdoors to extract heat from the ambient air. Therefore, whenever the compressor operation is stopped during ambient conditions below 0°C, the water inside the pipes may freeze and expand, this can damage the water pipes and the components. In order to prevent this, the Anti-Freeze Protection control function is activated by default. In non-operation mode, if the outside temperature drops to 3°C or below, the pump on the water pipe side is forcibly operated to prevent freezing in the water pipe. For external water pipes and Anti-Freeze protection feature use propylene glycol with a toxicity rating of Class 1 as listed in Clinical Toxicology of Commercial Products, 5th Edition¹.

¹ Please refer to the installation manual for detailed anti-freeze specifications. Anti-Freeze Protection control should be used only for auxiliary measure in addition to glycol mixture.

Twin Rotary BLDC Compressor

The smart compressor design and premium moving parts of the EHS deliver a balanced performance, fully complying with EU regulations for enhanced efficiency¹.

The Twin Rotary BLDC Compressor² of the EHS outdoor unit offers you greater efficiency and reliability. Its twin cams and two balance weights create low levels of vibration, contributing to a smoother and quieter all-round performance. The use of high quality moving parts, such as robust bearings and premium matching rollers and vanes, also ensures much better stability and durability.

¹ All Samsung EHS products comply to EU EcoDesign's Minimum Energy Performance Standards (MEPS).

² For detailed information on the specific compressor type, please refer to the specification table of each EHS outdoor model.

BLDC Rotor

Twin Rotary Compressor

Quieter Current Wave

The combination of superior insulation and low vibration generates less noise, so it creates a comfortable atmosphere. Due to Samsung's newly developed Sine Wave Controller technology you can hear much less noise when the air conditioner is running as compared to previous versions. Unlike a conventional Square Wave Controller, which emits a noticeable sound, it produces current waves that have a smooth curve with no spikes or ripples. This significantly reduces the noise created by the outdoor unit, so it operates very quietly¹ and creates less disturbance.

¹ Based on Samsung's internal test results compared with the Samsung AR09FSSKABENEU model. Individual results may vary.

Double-layered Sound Insulation

The compressor is fully covered in double-layered sound insulation material that absorbs and minimizes noise. When it is applied, the sound becomes about 3 dB(A) quieter¹. So it operates quietly and discreetly², while still delivering high-quality performance.

¹ When testing Split 6 kW and 9 kW models based on Samsung's internal testing in Korea. Results may vary depending on environmental factors and individual use.

² Noise level is measured 3 m away from front side of outdoor unit in an anechoic room. It may differ depending on operation condition and acoustic environment (test condition: A7/W35).

Indoor solutions

Discover our new indoor solutions for your heating and domestic hot water. They are compact, easy to install and offer a perfect fit for almost any home. Depending on your needs, you can choose the ClimateHub, a Hydro Unit or a Control Kit.

The ClimateHub's design also offers easy access for servicing. It has a detachable AI Home 7-inch touch display for user-friendly monitoring and control. When connected to the SmartThings app¹, users can efficiently manage their energy usage.

¹ Available on Android and iOS devices. A Wi-Fi connection and Samsung account are required.

Indoor Units

EHS Hydro Unit

Easy installation

Hydro Unit allows for easy installation in combination with a third-party tank. Improved defrost operating logic ensures that the water used for defrosting does not interfere with the heating function. The wider heating control range reduces the Thermo off time and improves overall efficiency and dependability. Magnetic filters and 3-way valves are standard. The 2-zone models¹ produce two zones without any additional equipment. The electric heater can operate at 2kW, 4kW (for single-phase) and up to 6kW (for three-phase).

How it works and what's needed

The new Hydro Unit is easy to install, maintain and service. With all major field installation parts now built into the unit making all installation efforts more time efficient.

EHS ClimateHub

Easy installation

The integrated design of the new ClimateHub with most necessary hydraulic components inside the unit, allows for easy installation, even in one day. Improved defrost operating logic ensures that the water used for defrosting does not interfere with the heating function. The wider heating control range reduces the Thermo off time and improves overall efficiency and dependability. Magnetic filters, 3-way valves, and an expansion vessel are standard. The 2-zone models¹ produce two zones without any additional equipment. The electric heater can operate at 2kW, 4kW (for single-phase) and up to 6kW (for three-phase).

How it works and what's needed

The new ClimateHub is easy to install, even in one day. The evolution of the original ClimateHub design means that the major field installation parts are now built into the hub to reduce time and effort needed during installation, maintenance and servicing.

Energy saving

The overall heat transfer area has been expanded by 23% and the domestic hot water efficiency has been increased from 115% to 148%². Thanks to triple insulation, heat loss has been reduced by up to 56%³.

Improved interaction

AI Home offers users a sophisticated smart home control experience with real-time updates on energy usage on the detachable 7" display. It has a standard range of 2m; the optional 30m wire offers extra range. Schedules can be easily adapted, and temperatures adjusted to fit the outside weather conditions⁴. The full range of functionality is available when the AI Home is connected to the PV system⁵ (if available) and other devices allowing efficient energy management by optimizing hot water and heating operations.

Users can enhance the smart home solutions by integrating the AI Home with Samsung's SmartThings app, which enables them to control other appliances connected to the app through a Wi-Fi connection. AI Home features a user-friendly interface, supporting multiple languages and presents information through the intuitive layout on the 7" display.

¹ Available in both the ClimateHub and Hydro Unit. The 2-Zone model is equipped with a circulation pump, mixing valve and temperature sensor, which are not included in the Standard model. By adding a 3kW backup heater (MHC-300FP), which supports both single and 3 phases, you can create an electric heater that delivers up to 9kW, to provide reliable heating in extremely cold areas. The MHC-300HP is sold separately.

² Based on internal testing comparing the total heat loss: a conventional ClimateHub tank with PU Foam insulation = 92.3W, a new ClimateHub tank with 3 layered insulation = 42.4W. Based on overall heat transfer rate coefficient: a conventional ClimateHub tank with PU Foam insulation = 92.3W, a new ClimateHub tank with 3 layered insulation = 42.4W.

³ Based on the EU test conditions EN16147, compared to the previous model.

⁴ Wi-Fi connection and Samsung account required. Use a separate laptop/computer to create a Samsung Account. Required a connection between the EHS and compatible PV systems and activated using the PV function in AI Home. All the appliances must be connected to the SmartThings App via a Wi-Fi connection using the same Samsung account.

⁵ Required a connection between the EHS and compatible PV systems and activated using the PV function in AI Home. All the appliances must be connected to the SmartThings App via a Wi-Fi connection using the same Samsung account.

New Emergency Mode

During a system error in the heat pump outdoor unit, the emergency mode¹ will activate the built-in electric heater² of the indoor unit to provide heating and hot water. Emergency mode is set in the menu of the 7" display during installation to ensure uninterrupted heating when needed.

Slim-fit design

The slim-fit design of the renewed ClimateHub and Hydro Unit fits easily into a variety of spaces. Where the size of a Hydro Unit is comparable to average home appliances like washing machines, making it ideal for multi-unit houses and apartments, both new-builds and retrofits. The greige tint blends well into new and existing modern interiors.

Save time servicing

You can adjust the Field Setting Values on the Home Appliance Smart Service App³ or EHS Cloud Service instead of using an SD card to save time. Internal pipes have a Quick Connector for easy hand release and the Control box is easily accessible thanks to a hinged box, this will save time and effort during service.

One-click manual

AI Home provides easy access to the system's user manual. Users scan a QR-code using their smartphone to open and download the manual⁴ in several languages.

High-quality hot water cylinder

The new Samsung Hot Water Cylinder interacts well with our EHS heat pumps and offers improved dependability and efficiency for heating and hot water requirements.

Energy usage management

When linked to the Samsung's SmartThings App⁵, AI Home enables users to monitor and adapt energy usage in a simple way. If they have a compatible PV installation, they can monitor PV energy usage and solar levels as well. AI Energy mode⁶ connected to the SmartThings App can reduce electricity consumption.

¹ The function to automatically activate an emergency mode when an error occurs will be available from December 2024. For the models bought before time, this function will be available via a software update.
² Using the electric heater will increase energy consumption.
³ HASS App available is expected December 2024 earliest. HASS App needs to be connected (via USB or wireless) to the appliance to adjust settings. HASS App and EHS Cloud Service are subject to further terms and conditions.
⁴ When the EHS system is connected to the internet, the QR code can be found on the display of the AI Home.
⁵ Available on Android and iOS devices. A Wi-Fi connection and Samsung account are required.
⁶ The SmartThings AI Energy mode, when used by the end-user, can provide users with a possibility to save energy with regard to their domestic hot water usage based on (repeatable) user pattern. The actual energy savings vary and depend on, amongst others, usage and operating conditions. The AI Energy mode may impact the product performance. End-user may deactivate the AI Energy mode at any time.

EHS Mono

Introducing an all-in-one solution for climate control: our Air-to-Water Monobloc system (EHS Mono). Outdoor units have capacities of up to 16 kW and use either the R290 or new R32 refrigerant, which has a lower GWP. Designed for unparalleled efficiency and versatility, this system ensures optimal heating, cooling, and domestic hot water (DHW) production. It can be seamlessly integrated with our ClimateHub system, which includes up to 260 liters of storage and all essential hydraulic components. Alternatively, you can choose our control kit to customise it with various other DHW storage solutions. A high-temperature version is also available, for users who require enhanced performance.

In short, our cutting-edge EHS Mono system offers superior comfort and efficiency. Put it to the test to experience all the benefits.

Flexibility and maximum silence even with the coldest temperatures

EHS Mono is the monobloc system of Samsung heat pumps capable of guaranteeing a constant flow of water up to 75°C, for maximum comfort even in the most extreme conditions.

Operation Overview

Mono HT Quiet

Premium R32 monobloc outdoor unit, for maximum performance and minimum noise. In combination with ClimateHub, Hydro Unit or control kit.

Mono R290

Without pump - R290 monobloc outdoor unit can be used in combination with ClimateHub, Hydro Unit or control kit.

With pump - R290 monobloc outdoor unit has hydraulic components already integrated. No need of indoor unit.

Configurations

ClimateHub + Outdoor unit

Hydro unit + Outdoor unit

External Unit	ClimateHub	Accessories	Controls	
				
Capacity (kW)	Capacity (L)	Control Kit	Wi-Fi Kit 2.0	Controller

* Also available in 3 phase model

Mono Standard

R32 monobloc outdoor unit is versatile and suitable for any installation solution. In combination with ClimateHub, Hydro Unit or control kit.

Control kit + Outdoor unit

Operating Modes

Air-Water Cooling

Possibility of cooling rooms using hydronic terminals.

Air-Water Heating

Possibility of producing DHW and heating rooms using hydronic terminals.

The new EHS Mono R290 heat pump

A refrigerant for the future

Samsung's new EHS Mono R290 heat pump is based on the natural refrigerant R290, which offers a much lower global warming potential (GWP) than other traditional refrigerant technologies.

This refrigerant helps reduce the environmental impact of heat pumps.

Lower installation time

EHS Mono R290

Reliable Heating

Adverse weather conditions can impact the life span and performance of outdoor units. The EHS Mono R290 is both durable and capable of operating effectively in hot and cold environments. The chassis and heat exchanger are corrosion resistant; its base is designed to drain condensed water even in the coldest temperature and it includes antifreeze protection systems to prevent water from freezing and bursting the pipes.

Made to work with R290

As R290 refrigerant is being used, the inside components of the unit have been adapted when compared to a regular mono heat pump. These adaptations support the separation of R290 refrigerant and the rest of the system. The EHS Mono R290 is designed in a way that alleviates pressure in the pipes and the plugs are sealed to prevent ignition.

Layer 1
Leakage prevention

Layer 2
Leakage detection

Layer 3
Exhaust

Layer 4
Ignition prevention

Slanted Grille

A new grille design has a 6° slope and is 18mm deep. The angled slats screen the inside from sight when you pass by it, even from only 1m away¹.

¹ Based on a viewing height of 1,700mm and a viewing distance of 1m.

Aesthetic Design

The EHS Mono R290 is a compact and stylish unit. The dark gray color seamlessly blends in and complements the styling of many modern buildings. The matte dark gray horizontal guard grille conceals the internal mechanical parts allowing it to blend with the surrounding environment without drawing attention. The compact design can fit in neatly below a window.

A **robust design** alleviates pressure in the pipe to prevent gas escaping.

- Reduction of parts that may cause a leakage
- Enhanced thickness of the U-bend
- Hairpin receiver protection
- Freezing and bursting prevention control

Sensors monitor the refrigerant and water pressures to detect leakages.

A **forced exhaust system** ventilates the inside of the outdoor unit. An **Air Separator** in the leaving water pipe prevents the leaked gas from flowing into the house.

Potential **ignition sources** are **sealed** and **located higher up** in the outdoor unit.

EHS Mono R290

Key features to achieve Low Noise are the Multi-Serration Fan, 2-layered insulation with groove grid felt, Spring grommet for the compressor mounting and Reinforced crank shaft in the compressor.

2-layered Insulation with Groove Grid Felt

This heat pump's outdoor unit features a double-layered, sound insulation system fitted with a patented Groove Grid Felt design, which effectively blocks and absorbs noise produced by compression parts and vibrations.

* Based on internal testing of the Noiselite-600G, compared to the PET-10T. The results only relate to individual materials and not the whole product, and may vary depending on the actual usage conditions.
** Patent No.:P2022-0012826.

Multi-serration Fan¹

The combination of large serration on the inner part and a small serration on the outer part minimizes the air vortex around the wing tip and significantly reduces the noise generated by the movement of the fan.

Comparison of the vortex

on the serration and normal edges

GI Steel Plate

The EHS R290 Mono outdoor unit uses Galvanized Iron (GI) Steel Plate with a PE powder coating of up to 100µm thickness, which is proven to improve corrosion resistance by 43%, based on the Complex Cycle Test (CCT)². So, it protects the cabinet from rusting and ensures it can endure harsh conditions.

Durafin™ Ultra

An anti-corrosive layer of epoxy acrylic and a hydrophilic layer of acrylic resin disperse water and reinforce its corrosion-resistance, which was proven using the Salt Spray Test (SST) over a period of 3,000 hours¹.

¹ Based on internal testing in accordance with ISO 9227, ISO 14993 and ISO 21207 using specimens from the heat exchanger of an EHS outdoor unit. For more details, please contact your local Samsung representative.

² Based on internal testing using corrosion chambers, Q-FOG and CCT-1100. The Complex Cycle Test (CCT) includes cycles of spray (for 2 hours at 35°C), dry (for 4 hours at 60°C with 30% Relative Humidity) and damp (for 2 hours at 50°C with 95% Relative Humidity) conditions. As a result, the Galvanized Iron Steel Plate (GI) formed red rust after 240 hours, which is 43% slower than general Electro-Galvanized Steel Plate (EGI) which forms red rust after 168 hours.

Antifreeze Protection Control

In the EHS Mono R290, the hydraulic parts that provide hot water are built into the outdoor unit. As a result, the water pipe exposed to the outside conditions might freeze if it stops operating in cold weather of below 0°C¹. So, the Antifreeze Protection Control continuously monitors the operating status and the outdoor temperature, and prevents the water pipe from freezing by forcibly pumping the water after a certain period of time².

¹ For external water pipes, the system must use either freeze protection valves or antifreeze: Propylene Glycol with a toxicity rating of Class 1 as listed in Clinical Toxicology of Commercial Products, 5th Edition. Please refer to the installation manual or detailed antifreeze specifications.

² For example, if it has stopped operating for 60 minutes when the outdoor temperature is 3°C, the pump on the water pipe side is forcibly operated to prevent the water from freezing in the water pipe.

Energy Saving | SCOP A+++

The EHS Mono R290 has an enhanced Seasonal Coefficient of Performance (SCOP) A+++ energy efficiency rating across the entire range of capacities¹. It has been increased by up to 14%² compared to the conventional models, providing up to 15% greater energy efficiency than the normal criteria required for the A+++ rating. So, it is proven to operate with a high level of efficiency.

¹ Based on internal testing when generating 35°C water, in accordance with EN14825. Results may vary depending on the system configuration and actual usage conditions.

² Based on internal testing when generating 35°C water using an EHS R290 Mono 5kW model, AE050CXDEK/EU (SCOP: 5.10), compared to an EHS R32 Mono model of the same capacity, AE050RXYDEG/EU (SCOP: 4.46).

Operates across a Wider Temperature Range

The EHS Mono R290 outdoor unit operates effectively across a much wider range of ambient temperatures. A conventional EHS Mono can generate hot water that is up to 65°C when the outdoor temperature is above 10°C and 40°C when it is -25°C outside. By comparison, the EHS Mono R290 provides hot water of 70°C¹, when the outdoor temperature is as low as -10°C² and can even generate hot water of up to 65°C if the ambient temperature drops to -30°C.³

Space heating

Domestic Hot Water

EHS Mono R290

Booster heater operation

EHS Mono R32

Booster heater operation

¹ Leaving water temperature, when the outdoor temperature is between -15°C ~ 43°C. Results may vary depending on the actual usage conditions.

² Based on a leaving water temperature of 55°C. Results may vary depending on the actual usage conditions.

³ Based on internal testing. Results may vary depending on the actual usage conditions.

Low Global Warming Potential of only 3

With EHS Mono R290, Samsung is offering an innovative solution for residential homes. The R290 refrigerant has a much lower Global Warming Potential (GWP) compared to other refrigerants. Only 3. New EU F-Gas regulations mean refrigerants must not exceed 150 GWP from 2027.

up to
99
lower GWP

%

Quiet Operation

Powered by a combination of innovative noise reducing technologies, the EHS HT Quiet operate quietly with noise levels as low as 35 dB(A)¹ using a 4-step Quiet Mode.

4-Step Quiet Mode

¹ Based on internal testing of the EHS Mono R290 outdoor unit. The noise level is measured 3m away from the front of the outdoor unit, in an anechoic room with an outside temperature of 7°C. Results may vary depending on environmental factors and individual use.

Higher Hot Water Temperature

Many older houses in Europe are still using radiators which require a hot water temperature of 65°C or higher to heat rooms effectively. The new EHS Mono R290 can consistently provide hot water of up to 75°C¹ for domestic heating purposes. The ability of the EHS Mono R290 to provide consistent hot water makes this heat pump a suitable heating system replacement in older residential spaces that have been previously dependent on gas boilers for their heating needs. Additionally, it can supply domestic hot water of up to 70°C² when the outdoor temperature is as low as -10°C without using the booster heater.

¹ Leaving water temperature, when the outdoor temperature is between -15°C ~ 43°C. Results may vary depending on the actual usage conditions.

² Domestic hot water (DHW) leaving the DHW tank is 70°C when the outdoor temperature is -10~43°C. If the outdoor temperature is lower than -10°C, a booster heater is required. Results may vary depending on the actual usage conditions.

Enlarged Heat Transfer Area

The EHS Mono R290 has an enlarged heat exchanger that is capable of transferring more heat at once compared to a conventional outdoor unit. Its heat transfer area is up to 39% larger¹. As a result, it can consume less energy to achieve the same cooling and heating performance.

¹ Based on Samsung's measurements on an EHS Mono HT Quiet (AE120BXYDGG/EU) model compared to a conventional outdoor unit (AE120RXYDGG/EU) with the same capacity.

Strengthened Compression Parts

To endure the higher pressure created by a new Scroll Compressor, the EHS R290 Mono uses strengthened compression parts. They have increased compression ratio¹, while still maintaining the efficiency and reliability of the compressors.

¹ Compression ratio = Discharge pressure/Suction pressure. Based on internal testing on an EHS Mono HT Quiet outdoor unit, compared to a conventional EHS outdoor unit. As a result, the discharge pressure has increased from 43 to 55kgf/cm²G, and the compression ratio has increased from 13 to 17.

Specifications ^{1/2}

EHS Mono R290 (Without Pump)

- Production of hot water to a maximum temperature of 75 °C
- New Climatehub, Hydro Unit and Control kit with embedded Wi-Fi module
- Low Ambient temperature operation
- SmartThings compatible
- 100% Heating Capacity at -10°C
- Easy installation and maintenance
- Premium Design
- Ideal for renovation applications
- Generates a low noise level (35dB)

* A+++ energy label is available according to EU No. 811/2013 label classification 2019, on a scale from D to A+++

¹ A2W Condition: (Heating) Water In/Out 30°C/35°C, Outdoor Air 7°C[DB]/6°C[WB]; (Cooling) Water In/Out 23°C/18°C, Outdoor Air 35°C[DB].

² A2W Condition: (Heating) Water In/Out 47°C/55°C, Outdoor Air 7°C[DB]/6°C[WB].

³ Standard/2-zone models.

⁴ Sound pressure level is obtained in an anechoic room. Sound pressure level is a relative value, depending on the distance and acoustic environment. Sound pressure level may differ depending on operation conditions.

Specifications

EHS Mono R290 (Without Pump)

- Production of hot water to a maximum temperature of 75 °C
- New Climatehub, Hydro Unit and Control kit with embedded Wi-Fi module
- Low Ambient temperature operation
- SmartThings compatible
- 100% Heating Capacity at -10°C
- Easy installation and maintenance
- Premium Design
- Ideal for renovation applications
- Generates a low noise level (35dB)

EHS Mono R290 With Pump

Convenience in Installation

Install the system and check the water pressure easily. All the parts for the water piping, like the pump and expansion tank, are fitted inside the unit, which reduces the installation time and space. And a water pressure sensor lets you conveniently monitor the water pressure on a remote controller.

Easy Installation and Servicing

The EHS Mono R290 with pump incorporates all of the parts needed for the water piping, including a water pump and water pressure sensor, so the installation process is simplified, saving the installer time and effort. In addition, the internal parts are easily accessible by removing the side panel, making servicing quick and easy for the installer.

Integrated Water Pump

The EHS Mono R290 with pump outdoor unit comes completely fitted with water piping, expansion tank, valves and control kit PBA to reduce installation time and space.

System Configuration

EHS R290 Pump

Built In Water Pressure Sensor

Water pressure can be easily checked on installing or testing the EHS Mono R290. All models are equipped with a water pressure sensor, which replaces the mechanical manometer in the indoor unit. So, our technical partners do not need to waste time and effort installing one separately and can quickly and conveniently monitor the precise water pressure using a remote controller.

EHS Mono HT Quiet

Hot Water Temperature

The EHS Mono HT Quiet combines advanced features to achieve hot water temperature of 70°C¹ and ensures that it is provided reliably. It combines various advanced features to achieve an incredibly hot water temperature and ensure that it provides a 100% heating performance even in extremely cold weather as low as -25°C².

¹ Leaving water temperature, when the outdoor temperature is between -15°C ~ 43°C. Results may vary depending on the actual usage conditions.

² Based on internal testing on an EHS Mono HT Quiet (AE120BXYDGG) outdoor unit, compared to a conventional EHS outdoor unit (AE120RXYDGG). Results may vary depending on the actual usage conditions.

Leaving Water Temperature

based on outdoor temperature²

Heating Performance

based on outdoor temperature²

Key features to achieve Hot Water Temperature are Enlarged heat transfer area, Flash injection technology and Strengthened compression parts.

Enlarged Heat Transfer Area

The EHS Mono HT Quiet has an enlarged heat exchanger that is capable of transferring much more heat at once. Its heat transfer area is approximately 11.9% larger¹ to help exchange heat quickly.

Conventional

AE120RXYDGG/EU

72.6m²

8.8% increase
Heat Transfer Area

EHS Mono HT Quiet

AE120BXYDGG/EU

79.0m²

¹ Based on Samsung's measurements on an EHS Mono HT Quiet (AE120BXYDGG/EU) model compared to a conventional outdoor unit (AE120RXYDGG/EU) with the same capacity.

Flash Injection Technology

The EHS Mono HT Quiet outdoor unit has a new Scroll Compressor that can compress refrigerant at much higher pressure, while its Flash Injection Technology increases the flow of refrigerant, so the compressor continues working reliably. Even at -30°C it can supply hot water of up to 60°C for non-stop comfort in the coldest conditions¹.

¹ Based on internal testing. Results may vary depending on the actual usage conditions.

Strengthened Compression Parts

To endure the higher pressure created by a new Scroll Compressor, the EHS Mono HT Quiet uses high impact Reed Valves, which are thicker and stronger, and an extended Oil Groove, which provides sufficient lubricant to ensure the performance and reliability of the compressor. As a result, the compression ratio has increased by approximately 31%¹.

¹ Compression ratio = Discharge pressure/Suction pressure. Based on internal testing on an EHS Mono HT Quiet outdoor unit, compared to a conventional EHS outdoor unit. As a result, the discharge pressure has increased from 43 to 55kgf/cm²G, and the compression ratio has increased from 13 to 17.

Reed Valves

Conventional

EHS Mono HT Quiet

With enhanced durability and response rate, the Reed Valves endure much higher discharge pressure, which has increased by approximately 27%.

Oil Groove on thrust bearing

Conventional

EHS Mono HT Quiet

With a 58° extended Oil Groove on the thrust bearing, the lubrication area has increased by about 24%. So, the compression part keeps working stably even under an increased discharge pressure.

Operates across a wider temperature range

The EHS Mono HT Quiet supplies hot water regardless of the external conditions. Flash Injection Technology ensures that it can maintain its heating performance in cold weather, while a Heat Sink radiates the heat of the inverter circuit more effectively to extend the operating temperature range.

Antifreeze protection heater (PHE)

When an outdoor unit turns off or is malfunctioning in cold weather, water inside it may freeze and burst vital parts. The EHS Mono HT Quiet has a heater on the Plate Heat Exchanger (PHE) that senses the temperature of the water in the PHE and keeps it above zero. So, it prevents the PHE from becoming frozen and bursting when it is not operating, even if the outdoor temperature reaches -30°C ¹.

¹ Based on internal testing using an EHS Mono HT Quiet AE140BYXDGG model. Operated in an outdoor temperature of -30°C for 20 hours.
² Only illustrative. The heater is not seen from the outside of insulation.

Heating Performance in cold climates

The EHS Mono HT Quiet's heating performance has been increased by 13%¹, enabling it to deliver a 100% heating performance in temperatures as low as -25°C². The heat pump has an enlarged heat exchanger that can transfer more heat at once compared to a conventional outdoor unit. The heat transfer area is up to 13% larger³. As a result, it can consume less energy to achieve the same cooling and heating performance.

¹ Based on internal testing, compared to a conventional EHS Mono. Conditions: A-10°C/W35°C, based on 8 kW models based on our TDB (technical data book) published as R290 is 8 kW, and R32 conventional is 7.11 so improvement is 13% increase of heating capacity.

² Efficiency ratio of heating output (capacity) versus power input (electricity). Internally tested under lab conditions based on EN 14511, results may vary depending on the actual usage conditions.

³ Based on Samsung's measurements on an EHS Mono HT Quiet (AE120BXYDGG/EU) model compared to a conventional outdoor unit (AE120RXYDGG/EU) with the same capacity.

Elevated Base Design with a Base Heater

During the heating operation in cold weather (-25°C or below), the defrost cycle used to remove ice on a heat exchanger can cause water to condense on it. The EHS Mono HT Quiet has an elevated base design with deepened and slanted gutters, so it drains condensed water much faster¹ to prevent it from freezing inside the cabinet. So, a base heater is equipped as a standard, which can quickly melt ice on the base and ensure the reliability of its heating operation.

¹ Based on internal testing on the EHS Mono HT Quiet outdoor unit compared to a conventional EHS outdoor unit.

Conventional AE120RXYDGG/EU

EHS Mono HT Quiet AE120BXYDGG/EU

Heat Sink

The inverter circuit generates a lot of heat, which affects the entire system's performance. The Insert Diecasting Heat Sink effectively radiates heat from the inverter circuit. It helps extend the heating operation temperature from 35°C to 43°C¹, so it reliably supplies hot water even in severely hot weather.

¹ Based on internal testing on the EHS Mono HT Quiet outdoor unit compared to a conventional EHS outdoor unit.

Quiet Operation

Powered by a combination of innovative noise reducing technologies, the EHS HT Quiet operate quietly with noise levels as low as 35 dB(A)¹ using a 4-step Quiet Mode.

4-Step Quiet Mode

Spring Grommet for the Compressor Mounting

Spring Grommets (instead of rubber grommets) are used for the compressor mounting, thus reducing the vibration transfer rate by 95%². The compressor utilizes a reinforced crankshaft, which decreases low frequency resonant noise, while the outdoor unit employs a multi-serration fan which significantly reduces the noise it generates by minimizing the air vortex.

Vibration Transmissibility

¹ Based on internal testing of the EHS Mono HT Quiet outdoor unit. The noise level is measured 3m away from the front of the outdoor unit, in an anechoic room with an outside temperature of 7°C. Results may vary depending on environmental factors and individual use.

² Based on a computational simulation in accordance with the theoretical formula of the spring grommet (EHS R290 Mono unit), compared to the rubber grommet (EHS R32 Mono unit). Results may vary depending on the actual usage conditions.

Slanted Grille

A new grille design has a 6° slope and is 18mm deep. The angled slats screen the inside from sight when you pass by it, even from only 1m away.*

* Based on a viewing height of 1,700mm.

Low Height

The EHS Mono HT Quiet outdoor unit is approximately 1m in height. So, it can be installed under a balcony window, which enhances your home interior as it does not affect the view out of the window.

Specifications ^{1/2}

EHS Mono High Temperature (HT) Quiet R32

- Production of hot water to a maximum temperature of 70°C
- SmartThings compatible with optional Wi-Fi kit
- New Climatehub Mono, Hydro Unit and Control kit with embedded Wi-Fi module
- Generates a low noise level (35 dB)
- 100% Heating Capacity at -25°C
- Premium Design
- Low Ambient temperature operation
- Easy installation and maintenance
- Ideal for renovation applications

* A+++ energy label is available according to EU No. 811/2013 label classification 2019, on a scale from D to A+++

¹ A2W Condition : (Heating) Water In/Out 30°C/35°C, Outdoor Air 7°C[DB]/6°C[WB]; (Cooling) Water In/Out 23°C/18°C, Outdoor Air 35°C[DB].

² A2W Condition : (Heating) Water In/Out 47°C/55°C, Outdoor Air 7°C[DB]/6°C[WB].

³ Standard/ 2-zone models.

⁴ Sound pressure level is obtained in an anechoic room. Sound pressure level is a relative value, depending on the distance and acoustic environment. Sound pressure level may differ depending on operation conditions.

EHS Mono Standard R32

Quiet Operation

The 3-Step Quiet Mode enables adjustable, low-noise operation to meet strict sound level requirements by selecting from three different steps to reduce the sound level by 3dB(A), 5dB(A) or 7dB(A)¹.

¹ Based on internal testing of the 6 kW and 9 kW Split outdoor units (AE060RXEDEG, AE090RXEDEG, AE090RXEDGG). The noise level is measured 3m away from the front of the outdoor unit, in an anechoic room with an outside temperature of 7°C. Results may vary depending on the model (capacity), environmental factors and individual use. Sound pressure levels are subject to execution and operating conditions.

Easy installation, quiet operation

If you are looking for an EHS that is easy to install and service, the EHS Mono is an excellent choice. Many parts needed for the water piping are already included in the unit. This simplifies installation and saves time and effort, too.

The outdoor unit of the EHS Mono R32 operates effectively across a wide range of ambient temperatures. When the outdoor temperature is above 10°C, it can generate hot water that is up to 65°C. Hot water with a temperature of 40°C is guaranteed even when the outside temperature drops to -25°C. This makes the system highly flexible and suitable for installation in many different climates.

In environments where sound levels are a challenge, the EHS Mono's 4-Step Quiet Mode offers great benefits. It enables users to reduce the sound level by 3 dB(A), 5 dB(A), or 7 dB(A) simply by selecting one of the steps. Thanks to this adjustable noise operation, the EHS Mono is capable of meeting strict sound level requirements.

Last but certainly not least, the EHS Mono uses R32 as a refrigerant. This has a lower Global Warming Potential (GWP) compared to other refrigerants, such as the R410A which is commonly used for heat pumps and air conditioners.

Specifications ^{1/2}

Mono Standard R32

R32

- Integrated solution for heating and domestic hot water
- New Climatehub Mono, Hydro Unit and Control kit with embedded Wi-Fi module
- Intuitive, colour screen touch controller in multiple languages.
- Energy monitoring through touch controller.
- Smooth servicing through the front-mounted service window.
- SCOP rating of A+++. *
- PV and Smart Grid ready.
- Backup heater is included to ensure a minimum water temperature.

* A+++ energy label is available according to EU No. 811/2013 label classification 2019, on a scale from D to A+++

¹ A2W Condition : (Heating) Water In/Out 30°C/35°C, Outdoor Air 7°C[DB]/6°C[WB]; (Cooling) Water In/Out 23°C/18°C, Outdoor Air 35°C[DB].

² A2W Condition : (Heating) Water In/Out 47°C/55°C, Outdoor Air 7°C[DB]/6°C[WB].

³ 65°C down to +10°C (max. 60°C down to -5°C)

⁴ Sound pressure level is obtained in an anechoic room. Sound pressure level is a relative value, depending on the distance and acoustic environment. Sound pressure level may differ depending on operation conditions.

⁵ Standard/ 2-zone models.

Specifications

Mono Standard R32

R32

- Integrated solution for heating and domestic hot water
- New Climatehub Mono, Hydro Unit and Control kit with embedded Wi-Fi module
- Intuitive, colour screen touch controller in multiple languages.
- Energy monitoring through touch controller.
- Smooth servicing through the front-mounted service window.
- SCOP rating of A+++.
- PV and Smart Grid ready.
- Backup heater is included to ensure a minimum water temperature.

EHS Split

Discover our EHS Split Air-to-Water system, which features R32 external units with capacities up to 16 kW and R410A units ranging from 12 to 16 kW. The EHS Split system delivers exceptional performance for heating, cooling, and domestic hot water (DHW) production. It connects seamlessly with our ClimateHub system, offering up to 260 liters of storage and all essential hydraulic components. Alternatively, you can opt for our versatile hydronic module for integration with various other DHW storage solutions. Find out more about our Split Air-to-Water system and experience unmatched efficiency and versatility.

Why choose the EHS Split system?

A solution with high efficiency and maximum flexibility.

Perfect for every application need: EHS Split allows, through a separate hydro Unit, to produce domestic hot water, underfloor heating/cooling and power low-temperature radiators.

Operation Overview

Fancoil

Fancoil unit with connection to the hydraulic circuit.

Underfloor heating

Radiant floor coil (not supplied by Samsung) connected to the heat pump. Controlled by Samsung or third-party thermostat.

Outdoor Unit

Air-to-Air external unit via refrigerant piping to the water production module.

ClimateHub (alternative Hydro Unit)

Integrated indoor solution for heating and cooling with domestic hot water production. Includes all hydraulic components and a storage tank for DHW up to 260 liters. In alternative to the ClimateHub, the Hydro unit can be installed (with a separated DHW tank)

Configurations

Available in 4.4 – 9 kW

Hot water temperature

The EHS Split can produce hot water of up to 65°C, depending on the ambient air temperature. When the discharge temperature is below 20°C and the outdoor temperature is below 24°C, the Backup Heater is operated to help raise the temperature above a certain level. And, using a Booster Heater, the Tank Integrated Hydro Unit can provide water of up to 70°C.

Refrigerant R32

The EHS Split range uses the next generation of R32 refrigerant, which helps and lower the impact on global warming. It is equipped with an Ozone Depletion Potential (ODP) of zero and a lower Global Warming Potential (GWP) than conventional R22 or R410A refrigerants¹. It also reduces the amount of refrigerant needed and cuts CO₂ emissions², so it's much more environmentally friendly.

¹ GWP rating: R32 refrigerant = 675 vs. R410A refrigerant = 2,088.

² The Samsung EHS Mono and Split (R32) only require 83 % of the refrigerant used in a conventional heating system (R410A) of the same capacity. So the level of CO₂ emissions of the EHS is 560 (675 x 0.83), which is 73% less than the 2,088 produced by a conventional heating system.

Base Heater

The EHS¹ outdoor unit is specifically designed to provide an optimal performance in extremely cold environments. It features a Base Heater (150W), which improves the defrost operation duration. Therefore contributes in keeping the base plate of the outdoor unit free from ice build-up. Together with the standard feature of snow prevention control, it helps to prevent damage from snow drifts.

¹ Available only in >9kW Split model codes

Base heater prevents water condensation from freezing.

Energy Efficiency SCOP A+++

Our EHS Mono and Split include a range of advanced technologies that help optimise your energy usage. The Samsung EHS has a Seasonal Coefficient of Performance (SCOP) A+++¹ energy efficiency rating, therefore they are proven to operate with a high level of efficiency.

EHS Mono and Split achieve a good heating performance at low temperature by using R32 refrigerant. The R32 refrigerant has a high PdesignH (kW), and works reliably and efficiently even in cold climate.

¹ Air-to-Water Condition : (Heating)
Water In/Out 30°C/35°C, Outdoor Air
7°C[DB]/6°C[WB]; (Cooling) Water
In/Out 23°C/18°C, Outdoor Air 35°C[DB].

Ratio PdesignH to Rated Capacity

EHS Split

Quiet Operation

The 4-Step Quiet Mode enables adjustable, low-noise operation to meet strict sound level requirements by selecting from three different steps to reduce the sound level by 3dB(A), 5dB(A) or 7dB(A) or keep it as low as 35dB(A)¹.

¹ Based on internal testing of the EHS Split outdoor units. The noise level is measured 3m away from the front of the outdoor unit, in an anechoic room with an outside temperature of 7°C. Results may vary depending on the model (capacity), environmental factors and individual use.

4-way Piping

The EHS Split 4-way piping system¹ has pipe access possibilities at the front, side, bottom and rear, so it provides much more flexibility during installations. It can be configured to suit almost any installation location without additional fittings, while still being discreetly concealed.

¹ Only available on certain models. Contact your local Samsung representative for complete product information.

Specifications ^{1/2}

Split R32

- Integrated solution for heating and domestic hot water.
- 4-step quiet operation mode (down to 35 db(A)*).
- Compact unit size with large water tank (200 L & 260 L).
- Backup heater is included to ensure a minimum water temperature.

* 35dB(A) is only applicable for 6kW and 9kW outdoor units down to +4°C stated in 3m distance in an anechoic environment.

** A+++ energy label is available according to EU No. 811/2013 label classification 2019, on a scale from D to A+++

¹ A2W Condition : (Heating) Water In/Out 30°C/35°C, Outdoor Air 7°C[DB]/6°C[WB]; (Cooling) Water In/Out 23°C/18°C, Outdoor Air 35°C[DB].

² A2W Condition : (Heating) Water In/Out 47°C/55°C, Outdoor Air 7°C[DB]/6°C[WB].

³ 65°C down to +10°C (max. 60°C down to -5°C)

⁴ Sound pressure level is obtained in an anechoic room. Sound pressure level is a relative value, depending on the distance and acoustic environment. Sound pressure level may differ depending on operation conditions.

⁵ ODU: Outdoor Unit, IDU: Indoor Unit

⁶ Standard/ 2-zone models.

Specifications

Split R32

- Connectable with R32 Split Outdoor Unit in combination of third party Tank.
- Compatible with thermostats, solar panels and back-up boilers.
- Intuitive, colour screen touch controller in multiple languages.
- Energy monitoring through touch controller.
- PV and Smart Grid ready.
- 2-zone Control, suitable for floor heating and radiators.
- SmartThings compatible with optional Wi-Fi kit.
- Backup heater is included to ensure a minimum water temperature.

EHS TDM Plus

Our integrated Air-to-Air and Air-to-Water system TDM is equipped with R410A outdoor units with a capacity of up to 16 kW. This versatile system supports up to 7 direct expansion indoor units, including wall-mounted, ducted, and console types. For seamless water heating, cooling, and domestic hot water (DHW) production, you can connect the TDM to our ClimateHub system, which offers up to 260 liters of storage and all the essential hydraulic components. Alternatively, you can integrate the TDM with our hydronic module for compatibility with various DHW storage solutions. Discover our all-in-one climate control solution for enhanced climate comfort.

Why choose the EHS TDM PLUS system?

EHS TDM Plus is the All-In-One solution for air conditioning systems, capable of cooling environments with the innovative WindFree™ technology and, in combination with low-temperature heating systems, drastically reducing the use of electricity during winter operation.

Operation Overview

Air conditioners
Wall-mounted models with WindFree™ technology, consoles and low and medium prevalence ducted units available. Management via wired or wireless control.

Fancoil
Fancoil unit with connection to the hydraulic circuit.

Underfloor heating
Radiant floor coil (not supplied by Samsung) connected to the heat pump. Controlled by Samsung or third-party thermostat.

ClimateHub (alternative Hydro Unit or Control Kit)
Integrated indoor solution for heating and cooling with domestic hot water production. Includes all hydraulic components and a storage tank for DHW up to 260 liters. In alternative to the ClimateHub, the Hydro Unit can be installed (with a separated DHW tank) or a control kit, in case of no need of hydraulic components (most flexible solution).

Outdoor unit
Air-to-Air external unit connected by refrigerant pipes to the water production module and to the direct expansion internal units.

Configurations

Available in 4.4 – 9 kW
Cooling / Heating / ACS

TDM Plus + ClimateHub

Outdoor unit connected to direct expansion indoor units and ClimateHub

TDM Plus + Hydro Unit + DHW tank

External unit connected to internal direct expansion units, Hydro Unit and domestic hot water tank.

Outdoor unit

+

Air-to-Water

+

Air-to-Air

How does it work?

Air-Water Cooling or Heating

Possibility to produce DHW, heat and cool environments using only the hydronic terminals.

Air-to-Air Cooling or Heating

Possibility of heating and cooling rooms using direct expansion internal units.

Air-Air plus Air-Water

Possibility of using direct expansion internal units and hydronic terminals in a combined manner.

TDM Plus

The EHS TDM Plus is a one-stop solution that provides hot water to heat radiators, floors and sanitary systems, along with hot or cool air – to create a comfortable environment all year round. These heating and cooling sources can be operated based on time division schedule, making it suitable for use in a variety of scenarios. So, it can be adapted to suit any specific needs, ensuring maximum comfort and convenience.

Schematic drawings are for illustrative purposes only. For accurate installation information please consult the technical data book. The selection of the exact product is subject to specific application conditions. Solar panels, underfloor heating panels, radiators and non-integrated components are not provided by Samsung unless specified otherwise. For more detailed product information and technical specifications, please consult the respective product pages of this Product Catalogue.

- 1 Outdoor unit**
Offers high performance in all conditions.

- 2 Photovoltaic panel**
Can be connected with EHS.

- 3 Dispensing hot water**
The hot water can be used at any time of the day.

- 4 ClimateHub**
Integrated solution for heating/cooling and domestic hot water supply.

- 5 Indoor units**
Air-to-Air wall-mounted, console or duct unit for cooling or heating.

- 6 EEV Kit**
Possibility to reduce noise (only for interior walls).

- 7 Control Panel MWR-WW10*N**
Controls ClimateHub

- 8 Wi-Fi kit**
It allows monitoring and management of the system using smartphones remotely with the SmartThings app.

- 9 Floor heating / cooling**
Hot water circulates in the floor panels heating / cooling the space

Fast Heating Using TDM Plus technology (Time Division Multi)

Underfloor heating is known to be an optimal system for ideal thermal comfort. It reaches a set temperature 4–8 hours from the moment of its activation. The TDM Plus technology used in the EHS system, also provides for the use of Air-to-Air indoor units, thus drastically reducing the time to reach the desired room temperature.

TDM, the patented technology for optimally controlling energy use

The ability to simultaneously provide hot water along with heating and cooling using only one outdoor unit requires a precise heat pump design and an advanced control algorithm. Samsung's TDM technology uses its own algorithm to optimally control the refrigerant and maximize the efficiency of the heat pump system when heating and cooling. These system and algorithm have been patented in many countries, including the US and Europe.

TDM Plus

High performance even at low temperatures

The TDM Plus system is equipped with an inverter compressor able to deliver up to 90 % of its nominal potential even at an outside temperature of -10°C . Operation is guaranteed even if outside temperatures drop up to -25°C .

Quiet Operation

The Silent function allows you to reduce noise levels of the outdoor unit up to 7 DB (in 3-steps), making it ideal for operation even at night. Activation is programmable through the remote controller.

Emergency Mode

Even in case of interruption of the operation of the outdoor unit, the ClimateHub guarantees the production of hot water.

PV enabled & Smart Grid Ready

It allows to optimize the self-consumption of electricity produced by photovoltaic panels. Connection is already prepared on the hydronic modules and in the ClimateHub and Samsung EHS systems.

Smart Grid management

Connection is managed internally by turning it off in peak situations.

Quiet operation

Wall-Mounted WindFree™ Deluxe

Auto Clean

The Auto Clean functionality enables cleaning of the heat exchanger anytime after you turn off the unit. This function automatically dries the Heat Exchanger using a 3 step process and prevents the build up of bacteria and odors. It can easily be enabled or disabled with the click of the remote controller.

Samsung's roller type bracket makes mounting the unit much easier. Simply hang it on the unit and find the best place to install it by sliding the bracket from side to side.

Installation time¹:
5.1 min

¹ Tested on the AM022TNVDKHEU model compared with the Samsung AM022JNVKHEU model under specific conditions and may vary on specific factors

Easy Installation and Servicing

The TDM Plus WindFree™ wall-mounted air conditioner features a snap-fit bottom cover that can be easily opened and closed. There are two screw points which allows for convenient installation and servicing. Unlike conventional brackets that can be fitted on two fixed hooks, the unit uses a roller type bracket that simplifies the installation process. This makes it easy to mount by installing the bracket on the wall and sliding it effortlessly into the exact position you want.

AI Auto Comfort

AI Auto Comfort introduces residents to the experience of intelligent climate control¹. To make life simpler and more efficient it automatically optimises the various modes by analysing room conditions and usage patterns². Based on the users' preferred indoor temperature and the actual outside temperature, the unit automatically switches to the most appropriate cooling and heating mode to maintain optimal and comfortable room conditions. This includes WindFree™, Fast and Normal Cooling and heating.

¹ AI = Artificial Intelligence. A Wi-Fi connection and Samsung SmartThings application account are required.

² Stores user data, preferences and usage patterns, enabling it to suggest the most comfortable room temperature set point within a range of 22°C to 26°C.

WindFree™ Cooling

WindFree™ Cooling mode keeps the room comfortably cool. It cools gently and quietly, dispersing air through 23,000 microholes so that consumers never have to deal with the unpleasant feeling of a cold draft on their skin. This results in a “Still Air” environment¹ with a very low air speed and limited noise². The advanced airflow structure of this mode also means that it cools a wider and larger area more evenly. And it consumes up to 77 % less energy than Fast Cooling mode³ so consumers can stay comfortably cool while reducing energy costs.

¹ ASHRAE (the American Society of Heating, Refrigerating, and Air-Conditioning Engineers) defines “Still Air” as air currents moving at speeds below 0.15 m/s, with no cold drafts.

² Tested on the AR12TXCAAWKNEU model in an anechoic environment. WindFree™ mode generates 23 dB(A) of noise, compared to 26 dB(A) produced by the conventional Samsung model. Sound pressure level is a relative value, depending on the distance and acoustic environment. Sound pressure level may differ according to operating conditions.

³ Tested on the AR12TVEAAWKNA model under specific testing conditions, based on the power consumption of Fast Cooling mode versus WindFree™ Cooling mode.

Easy to detach

Easy to clean

Easy Filter Plus

Unlike conventional filters that may be difficult to access the Easy Filter Plus is located externally on the top of the unit. This means it can be easily removed and cleaned without needing to open a cover or pull hard on it. Thanks to the filter's dense mesh it's very effective at capturing dust and therefore keeping the Heat Exchanger clean and working efficiently. The special coating on the filter helps protect residents from certain airborne contaminants¹.

¹ Tested in an external Korean test lab (FITI). Data has been measured under specific testing conditions and may vary depending on environmental factors and individual use. Certain airborne contaminants referred to are Escherichia coli ATCC 25922, Staphylococcus aureus ATCC 6538.

Antibacterial process¹

Silver ions penetrate the surface of bacteria when they come into contact with the Zeolite coating

Silver ions react with the bacterial proteins

Slim Duct

2-way Air Inlet

The TDM Plus Slim Duct has a 2-way air inlet – bottom or rear – that gives much more flexibility in selecting an installation location. It can be configured to provide the optimum airflow to almost any room, while being concealed behind ceilings.

Slim & Compact Design (199 mm Height)

Enhance the look and feel of almost any space with the TDM Plus Slim Duct. Being 199 mm high and 700 mm¹ wide, its slim and compact design is highly elegant, so it can be discretely concealed in many locations. It also makes installation, maintenance and repair quick and easy, so it's ideal for a wide range of businesses and residential homes.

¹ Based on the AM036KNLDEH/EU model. The width of other models may vary.

MSP Duct

3-way Service Access

Install the ducted air conditioner in various locations, but still enjoy easy access for servicing. It can be accessed from three directions –top, side and bottom– using an easy to remove Slide Fit cover. So it's simple to maintain wherever it is installed in, which saves time and money.

Top access

Bottom access

Side access

Auto ESP Adjustment

Enjoy maximum comfort and efficiency with minimum effort. The Auto ESP Adjustment automatically optimizes the air volume and pressure and minimizes noise, ensuring consistent cooling and heating in any situation. The external static pressure (ESP) can also be adjusted using a remote control. The Auto ESP adjustment feature is applicable only in MSP Duct lineup.

Console

Slim and Smart Design

The TDM Plus Console has a slim and smart design. Being just 199 mm thick, it will fit into almost any space and helps maintain optimal temperature. An innovative panel also prevents dust from accumulating. The black touchscreen display adds convenience and elegance.

Slim design

Smart display

2-Way Air Outlets

The 2-Way Air Outlets ensure that every inch of space quickly reaches the desired temperature, and stays that way. Warm air is expelled from the bottom air outlet, helping to spread warmth evenly throughout the room.

Low dB

Silent Mode

The TDM Plus Console allows for a selection of 4 operating modes (High, Medium, Low and Silent) to enjoy optimal heating and cooling in a variety of situations. In Silent mode it generates a quiet, but comfortable airflow with a noise level of 23 dB(A)¹.

¹ Based on internal testing. Results may vary depending on individual use.

Specifications ^{1/2}

TDM Plus

- 'All in one' Air-to-Water and Air-to-Air system.
- PV and Smart Grid ready.
- Compact unit size with large water tank (200L & 260L).
- 2-zone control, suitable for floor heating and radiators.
- Intuitive, colour screen touch controller in multiple languages.
- SCOP rating of A+++.
- Energy monitoring through touch controller.
- SmartThings compatible with optional Wi-Fi kit.
- Smooth servicing through the front-mounted service window.
- Backup heater is included to ensure a minimum water temperature.

* 35dB(A) is only applicable for 6kW and 9kW outdoor units down to +4°C stated in 3 m distance in an anechoic environment.

** A+++ energy label is available according to EU No. 811/2013 label classification 2019, on a scale from D to A+++

1 A2W Condition : (Heating) Water In/Out 30°C/35°C, Outdoor Air 7°C[DB]/6°C[WB]; (Cooling) Water In/Out 23°C/18°C, Outdoor Air 35°C[DB].

2 A2W Condition : (Heating) Water In/Out 47°C/55°C, Outdoor Air 7°C[DB]/6°C[WB].

3 Sound pressure level is obtained in an anechoic room. Sound pressure level is a relative value, depending on the distance and acoustic environment. Sound pressure level may differ depending on operation conditions.

4 ODU: Outdoor Unit, IDU: Indoor Unit

5 Standard/ 2-zone models.

* On the scale from A (highest efficiency) to F (lowest efficiency)
** On the scale from A+ (highest efficiency) to F (lowest efficiency)
*** On the scale from A++ (highest efficiency) to D (lowest efficiency)
**** On the scale from A+++ (highest efficiency) to D (lowest efficiency)

Specifications

TDM Plus

- 'All in one' air-to-water and air-to-air system.
- Connectable with R410A Split ODU in combination of third party Tank.
- Compatible with room thermostats, solar pumps, 2- or 3-way valves and back-up boilers
- PV Enabled and Smart Grid ready.
- 2-zone Control, suitable for floor heating and radiators.
- Backup heater is recommended to ensure a minimum water temperature.

Capacities are based on (Equivalent refrigerant piping 7.5m, Level differences 0m)

Cooling: Indoor temperature 27°C DB, 19°C WB / Outdoor temperature 35°C DB, 24°C WB

Heating : Indoor temperature 20°C DB, 15°C WB / Outdoor temperature 7°C DB, 6°C WB

¹ EEV Kit is necessary to control the refrigerant flow in the TDM Plus WindFree™ Deluxe (EEV Excluded), please order EEV Kit separately.

² Sound pressure level is obtained in an anechoic room. Sound pressure level is a relative value, depending on the distance and acoustic environment. Sound pressure level may differ depending on operation conditions.

Specifications

DVM

Our VRF solutions (also referred to as DVM Systems) focus on reliability, efficiency, comfort and design flexibility and allow for one outdoor unit to connect to up to 64 indoor units. Our comprehensive VRF range, from the DVM S2 to DVM S Water to DVM S Eco to DVM S Mini, offers a smart climate solution for large commercial applications.

DVM Hydro Unit

Performance

The Samsung DVM Hydro unit provides a single solution for cooling, heating and hot water that is both efficient and easy to manage.

An Integrated Solution in One System

The DVM Hydro system is compatible with all DVM S Mini R32 and DVM S2 outdoor units and can be added to create a single, integrated solution for cooling, heating and hot water that's simple to manage. So it ensures much greater efficiency to suit a variety of demands, generating substantial energy and cost savings with its high-efficiency heat pump technology.

2 Types - with a Choice of Hot Water needs

The DVM Hydro is available in two types. The DVM Hydro HE provides water at a mid temperature of 50°C, while the DVM Hydro HT's advanced, double compression technology generates much hotter water at 80°C. The perfect solution to satisfy the requirements of various sites.

Integrated Control System

The DVM Hydro can be independently or centrally operated along with a variety of Samsung DVM Systems. For standalone use on individual sites it has its own control system or, using the Samsung DVM S Controller, it can be integrated with various DVM Systems eg. for water and air, and managed centrally.

Simple & Easy Connection for External Control

The DVM Hydro is very quick and easy to install and use for many different purposes. It includes a range of connections for various external input and output devices, such as Tank Sensors, Booster Heaters, 2- and 3-way Valves, and Room Thermostats.

Installation & Control

The Samsung DVM Hydro is easy to install and connect to a range of other devices, and can also be independently or centrally controlled.

Specifications

DVM Hydro Unit

- Production of low temperature hot water and chilled water.
- Hot water production to a maximum temperature of 50°C (80°C for HT models).
- Two-way control: leaving water temperature and room temperature control.
- Connection to low temperature radiators and AHU water coils.
- Hot water production for domestic hot water use.
- Connectable to Heat Recovery DVM S systems (excluding 50 kW hydro unit).

 - Indoor temperature: 27°C DB, 19°C WB
 - Outdoor temperature: 35°C DB, 24°C WB

² Nominal heating capacities are based on;
 - Water temperature: 30°C inlet, 35°C outlet
 - Indoor temperature: 20°C DB
 - Outdoor temperature: 7°C DB, 6°C WB

³ Sound pressure level is obtained in an anechoic room. Sound pressure level is a relative value, depending on the distance and acoustic environment. Sound pressure level may differ depending on operation conditions.

Wireless / Wired Remote Controllers

Wireless Remote Controller SolarCell Remote Controller

AR-CH01E

NEW

Key Features

- Operation ON/OFF control
- Mode (Auto, Cool, Fan, Dry, Heat)
- Operation temperature setting
- Air flow direction
- Fan speed control
- Indoor unit option code setting

Options (depends on selected model code)

- Option/Setting selection/ Model selection (Standard/360)
- WindFree™ cooling function
- Long wind/Quiet/Purify/Turbo fan speed
- Filter replacement alarm reset
- Individual blade control
- Auto Clean
- Motion detection
- Freeze wash
- Lighting/ Beep
- ON/OFF timer
- Good Sleep
- Heating range (Temperature control in heat mode 8 °C to 30 °C)

AI Features

- AI Comfort
- AI Diagnostics

Power & Dimensions

- 0.95 inch OLED display
- Charging via SolarCell & USB-C type
- Net dimensions (W x H x D): 35 x 160 x 13mm

Wireless Remote Controller Standard with WindFree™

AR-EH03E

- WindFree™ On/Off
- Filter replacement alarm reset
- Simple On/Off timer
- Indoor unit option code setting
- Temperature setting range
- Auto/Cool/Dry: 18°C–30°C
- Heat: 16°C–30°C
- Direct/Indirect function On/Off
- Motion Detect Sensor necessary
- Net dimensions (W x H x D): 48 x 138 x 24mm

Wired Remote Controller Standard type for EHS

MWR-WW10N
MWR-WW10JN
MWR-WW10KN

- Full color 4.3" LCD screen
- Easy and Intuitive UI
- 2-zone Control
- LCD Backlight
- Multiple Language support*
- IR receiver is included
- Daylight Savings Time
- °C / °F Convertible
- Error List display
- Built-in room temperature sensor
- SD slot
- Net dimensions (W x H x D): 120 x 120 x 19mm

* Available languages:

MWR-WW10N: English, German, French, Italian, Spanish, Polish

MWR-WW10JN: English, Portuguese, Dutch, Greek, Czech, Slovak

MWR-WW10KN: English, Finnish, Swedish, Norwegian, Danish, Lithuanian.

Wired Remote Controller EHS New ClimateHub Indoor Unit (integrated)

NEW

Easy to use

Enjoy easy control and added peace of mind. It lets you edit schedules and can automatically adjust the set temperature to suit the outside conditions*.

Non-stop heating

If the heat pump is not working, an emergency mode** can be simply activated on the display to keep you warm and provide hot sanitary water using an electric heater***.

AI Home

Get smart about your heating and home. AI Home* is an intuitive control center with a 7" touch display that supports various languages** and has a simple layout and icons. It also lets you monitor your solar PV energy usage***. And you can control smart appliances**** connected to SmartThings.

Effortless support

The AI Home also provides easy access to the system's user manual. It allows you to download it onto your smartphone simply by scanning the QR code shown on the 7" display****

* When operating in Auto mode with a Water Law setting.

** The function to automatically activate an emergency mode when an error occurs will be available in November 2024. For the models bought before time, this function will be available via a software update.

*** Using the electric heater will increase energy consumption.

**** When the EHS system is connected to the Internet, the manual can be found on the display of the AI Home in November 2024.

Wired Remote Controller

MWR-WG00JN
MWR-WG00KN

Air conditioner/ERV control

- AC control: ON/OFF, operation mode, temperature setting, fan speed, airflow direction
- ERV control: ON/OFF, operation mode, fan speed
- AC/ERV error monitoring
- Filter cleaning alert and reset alert time
- Control a maximum of 16 "Indoor unit + ERV" in a group with a single wired controller

Energy saving operation

- Upper/lower temperature limit setting
- Automatically stops operating when not used for certain period of time as set by user

Weekly operation schedule setting

- Weekly operating schedule (A/C only, ERV only, A/C+ERV)
- Set desired AC operation mode, temperature and fan speed to operate based on a weekly schedule
- Apply schedule exception day
- Energy consumption monitoring
- Operation time limit

User convenience function

- Child lock
- Different button permission levels
- Room temperature display
- Dual set point
- Built-in room temperature sensor
- Real-time clock: displays current time and day (summer time support)
- Multiple Language support*
- Service mode support
- Indoor unit cycle data monitoring
- Indoor unit option code setting and monitoring
- Indoor unit address setting and monitoring
- SD card slot

* Available Languages:

MWR-WG00JN: English, French, Spanish, Portuguese, Dutch, German

MWR-WG00KN: English, Italian, Greek, Czech, Slovak, Polish

Wired Remote Controller

MWR-WW00N

- Air conditioner/ERV operation setting (Horizontal air flow, WindFree™)
- LCD Backlight
- Air conditioner/ERV error monitoring
- Air conditioner individual blade control
- Filter cleaning alert/reset alert time
- Air conditioner/ERV interlocking control
- Energy saving control
- Automatic operation stop function
- Weekly operation schedule setting
- Button restriction function
- Built-in room temperature sensor
- Real time clock (Daylight Savings Time)
- Control max. 16 indoor units (Air conditioner + ERV) in group with single wired remote controller
- Net dimensions (W x H x D): 120 x 124 x 19.5mm

Wired Remote Controller Touch Simple type

MWR-SH11N

- Touch screen wired remote controller
- LCD Backlight
- IR receiver is included
- Away function
- Quiet mode, Sleep mode
- Reset filter cleaning alert indicator
- Air conditioner Individual/group control
- Operation On/Off timer function
- WindFree™/Long horizontal wind
- Button locking function
- Eliminate Operation Mode function: Auto/Cool/Dry/Fan/Heat mode
- Built-in room temperature sensor
- °C / °F Convertible
- Relative temperature setting function: -3 ~ +3°C setting
- Control max. 16 indoor units in group with a single wired remote controller
- Net dimensions (W x H x D): 94.2 x 122 x 19.5mm

Mono Control Kit

MIM-E03CN
MIM-E03EN
MIM-E03FN

- EHS R32 Mono control Kit
- Includes remote controller (MWR-WW10N) and flow sensor
- Mounting box with the control printed board assembly
- Leaving and return water sensors
- Domestic Hot Water sensor
- Net Dimensions (WxHxD) mm 290 x 110 x 370 mm
- MIM-E03EN has additional features: Smart Grid ready/PV enabled/2-Zone control
- MIM-E03FN is dedicated for new Indoor units

NEW

Features

Controls | Integrated Control

Controls | Centralised Control

Centralised Control Systems		
Touch Controller 2.0 MCM-A300BN		• Large Display: 10.1 inch touch LCD controller • Ease of use: Provides a familiar user experience thanks to the SmartThings UI style • Simple and modern design (Slim bezel 15mm, Resolution (pixels): 1280 x 800 (TFT LCD)) • Harmony with interior design, easy to select background image • Controls max. 128 indoor units • Can display energy usage for each device (Hour/Day/Week/Year) • Set detailed schedule according to each zone and indoor unit • History of error helps to check the cause of failure and take quick action • History of energy usage (Function available in RTS Q3'24) • Intuitive control (2D layout view) (Function available in RTS Q3'24) • Remote control by PC/Tablet (In-site) (Function available in RTS Q3'24) • Net dimensions (W x H x D): 245.7 x 164.5 x 30.9mm
Wi-Fi Kit 2.0 MIM-H04EN  		• Enhanced Convenience • Voice Control available through a smartphone with Bixby • Connected home with affordable units in every home using SmartThings • Welcome cooling and heating based on Geo-fencing • Individual indoor unit control • Personalized Climate Environment • Preferred automation • Multi-device experience interoperable with smart appliances • Energy Usage Monitoring • Current and daily, weekly or monthly energy usage* of the outdoor unit • Provides ease of installation • Easy set-up possible for up to 16 indoor units at once • Net dimensions (W x H x D): 185 x 130 x 29mm

* Calculated by Samsung's own algorithm, it cannot be used as a legal basis.

Controls | Integrated Control

Integrated Control Systems		
DMS2.5 MIM-D01AN		• Built-in web server for PC-independent management and remote access control • Multiple upper-layer control access (S-NET 3, Web-client) • Weekly/Daily schedule control • Power distribution function • Current time management even during power failure (for 24 hours) • Emergency stop function with simple contact interface • Individual/Group control of up to 256 indoor units, AHU and ERV • User editable control logic • Accessible level management. • Dynamic security management • Operation & error history management • Data storage in non-volatile memory & SD memory • Net dimensions (W x H x D): 240 x 255 x 65mm
b.iIoT Lite Software MST-BL1A		• Integrated building management solution for operational convenience and energy savings • Open platform which enables integrated control such as DVM, 3rd party devices via BACnet interface • Suitable for small & medium sized buildings • Management and remote access control up to 4000 points • Convenient control authority setting up to maximum 100 clients • Easy UI experience, HTML5-based Dashboard with a quick overview of customized data for each user • Operation & error history management: Information on the operation of indoor and outdoor units can be stored in graphs or Excel. • Weekly/Daily schedule control • 2D layout overview provides location-based intuitive monitoring by visualizing the location of DVM on the drawings of each building and floor. • Individual/Group/Zone control • Intelligent Energy Management help to provide more precise energy saving with data-based intelligent controls via algorithms, energy leakage detection and energy distribution • Energy consumption trend/energy target setting/tenant based power usage • Data-based comfort control prevents overcooling/overheating by calculating the proper temperature in consideration of climate and human factors (clothing and activity) • AI learning based pre-cooling/heating energy saving control predicts time to reach target temperature by learning temperature change and air conditioner setting • Price Response Control helps to reduces energy consumption and operation costs by controlling indoor temperature and outdoor unit performance by responding to the rates fluctuating by the time of the day. • Mandatory Hardware requirements: 2.5 GHz CPU, min 32GB RAM, Hard disk or SSD with capacity of 2 TB, 10/100/1000 Base-T (RJ-45 Connector) LAN Card and 1920 x 1080 resolution Display • Mandatory Software requirements: Windows 10/11 64-bit Chrome browser is recommended (60.x.x.x or newer)

Controls | Interface devices

Module, Application Kit, Gateway		
External Contact Interface Module MIM-B14		The Samsung Guestroom Management System saves users the energy and money wasted on cooling an unoccupied room. The air conditioner is activated when the Key-Tag is in place and turns off when the Key-Tag is removed. An external contact interface module provides direct indoor unit control via an external contact signal, as well as window-synchronised indoor unit control. The emergency control function features simple contact input. Plus the module generates indoor unit operation/error state output through relay contacts. • Direct indoor unit control by external contact signal • Window-synchronised indoor unit control • Emergency control with simple contact input • Indoor unit operation/error state output through relay contacts • Net dimensions (W x H x D): 50 x 80 x 35mm
Modbus Interface Module MIM-B19N		A BMS or 3rd controller can control a Samsung SAC by using the Modbus protocol. • BMS unit protocol: Modbus RS485 (2 wires, max. 1,000m) • Unit connection protocol: Samsung Control Layer Protocol (R1/R2) • Max. No. of connection units: 1 outdoor unit (4 outdoor units including sub units in the case of modular installation) and 48 indoor units • Modbus interface module address range: up to 247 • Net dimensions (W x H): 50 x 80mm
Pulse Interface Module (PIM) MIM-B16N		The Watt-hour Meter Interface Module can be exclusively used for DMS 2.5 power distribution, displaying power consumption for each watt-hour meter. • Exclusive use for DMS 2.5 power distribution • Connection with up to 8 watt-hour meters • Pulse interface with watt-hour meters • Watt-hour meter - by 3rd party • Net dimensions (W x H x D): 240 x 255 x 65mm

Controls | Others

Module, Application Kit, Gateway		
S-Converter MIM-C02N		Communication converting module to connect a Samsung system air conditioner to a PC • Main reasons for use: - To connect with test run program [Test run program] - S-NET Pro: Conventional communication - S-NET Pro2: New communication • Net dimensions (W x H x D): 66 x 92 x 28mm
External Room Sensor MRW-TA		• Indoor unit is operated by MRW-TA instead of its own sensor. • Wire length: 12 m (39 ft)
Receiver Kit MRK-A10N		• Concealed wireless signal receiver • Filter replacement sign • Fan operation display • Operation Timer setting display • Operation On/Off button • Operation On display LED (blue) • Defrost operation display LED (red) • Net dimensions (W x H x D): 80 x 130 x 28mm

Design and support

Samsung Climate Solutions Partner Portal

As one of Samsung's registered Climate Solutions partners, you will have access to our Partner Portal and its many benefits. Whether you are looking for technical product documentation, requesting technical support or registering for training, the Samsung Climate Solutions Partner Portal offers you everything you need to consistently deliver the best results.

Access technical resources

The Technical Resources section provides you with all of the relevant information you need to understand the product's functionality and to prepare and design projects. A library full of

technical information is at your fingertips, ranging from technical data books, BIM files and certificates to exploded views, drawings and different kinds of manuals.

The screenshot displays the Samsung Climate Solutions Partner Portal. At the top, there is a navigation bar with the Samsung logo, a search bar, and a user profile section showing 'Welcome Test user'. Below this is a main menu with options: Home, My Page, Resources, Training, Case, and Help. The main content area is titled 'Climate Solutions (Air Conditioner and Heat Pump)' and includes a search bar for product codes. On the left, there are two sidebar filters: 'All' (selected) and 'Product' (listing Air to Water Heating (EHS), Commercial (CAC), Multi Split (FJM), Ventilation (ERV), Controls & Accessories, VRF & Chiller (DVM), and Residential (RAC)). Below these is a 'Category' filter showing 'Technical Resources' with 22334 items. The main content area features a 'Resource Spotlight' section with three featured technical data books: 'SINGLE Technical Data Book' (Wind-Free 4Way Cassette for Thailand), 'RAC Technical Data Book' (RAC for Europe), and 'RAC Technical Data Book' (Max Heat RAC for North America). Below this is a 'Recommendation' section with tabs for 'Most Popular', 'Newly Updated', and 'My Favorite'. The first recommendation is '[Service Bulletin] MCU-S2NEK2N MCU-S2NEK2N', which is a technical resource for controls and accessories, created on 17-Sep-2018.

Request technical support

You can easily request technical support through the Samsung Partner Portal by reporting your case using our built-in ticketing system. You can rest assured that our well-trained technical experts will work to solve your issue as soon as possible.

Register for training

If you are dedicated to becoming a Samsung climate solutions expert, you can access Samsung's educational portal for training sessions provided by experienced trainers. The portal allows you to search for online courses and materials, test your climate solutions knowledge, and more. The Samsung Business Academy is here to help you succeed.¹

¹ The registration process for and availability of training courses may vary per country. Please contact your direct Samsung contact person for more information.

How to access

1. Register

To register for the Samsung Climate Solutions Partner Portal, open your web browser¹ and go to partnerhub.samsung.com/climate to complete the registration form.

2. Access

Your information will be verified and your account will be activated. You will receive your personal login details.

3. Manage account

Keep your account details up to date and invite your colleagues to join.

4. Search and download

Access a full library of resources, request technical support, or sign up for a Climate Solutions Academy training session.

¹ Google Chrome is the recommended web browser for using the Samsung Climate Solutions Partner Portal.

EHS
Cloud Service

The all-new remote cloud service console for EHS

Our aim is to provide comfort and convenience for our technical partners to install our products where they're needed, ensure they're in great shape, and keep them in perfect working order. That's why we're launching EHS Cloud Service that helps our technical partners save time & costs.

How EHS Cloud Service works

1. Live charts

EHS Cloud Service shows live charts of the EHS's parameters, including download functions.

2. Energy consumption overview

This new remote cloud service console for EHS can provide you with an energy consumption overview.

3. Automatically issue notification

The service generates automatically issue notification of the EHS functioning directly to the end-user.

4. Monitors the correct behaviour

Allows you to monitor the correct behaviour of the EHS and avoid failures.

5. Supports preparation and clearer overview

Technical partners don't need to visit the site to check up on the installation. They can remotely access the EHS systems to check their cycle & status and change the Field Setting Values, and also manage the history of any changes made.

6. Highlights installations on a map

It highlights installations on a map to help arrange field visits.

EHS Cloud Service for everyone

EHS Cloud Service makes life easier for any technical partner. Not only the partner specialists but also the partner management as well as their customers will find EHS Cloud Service a helpful companion.

Your customers

- Enjoy peace of mind
- Automatic notification in case of issues
- Easily request service

Technical partners specialist

- Helps you to save time and costs
- Assess errors from a distance
- Prepare service visits

Technical partners managers

- Maintain control from a distance
- Keep an overview of issues solved and actions taken by specialists
- Keep overview of connected and served customers

Monitoring made simple

It's better to avoid a repair if possible. That's why EHS Cloud Service makes preventive monitoring much easier. With automatic reporting, power usage insights, and live parameter information, you can stay on top of the machines in your care. Allowing you to optimise the performance of the unit.

Data & insights

EHS Cloud Service can provide you with a wealth of technical data and insights¹ regarding the EHS device you're servicing. From error reports to malfunction types, and from status checks to energy consumption information. Wherever you are. Know what's going on at a customer's before you even make the trip.

More efficient service

Knowing the type of malfunction and looking at historic parameters chart, before heading out to a customer allows you to prepare your installation service beforehand. You might just save yourself a trip by collecting the necessary parts before you go. Some adjustments can even be made remotely.

Efficiency

You can save time: assess malfunctions from a distance, optimally manage your parts by making sure you have the right ones during your field visit and advise your customers regarding their usage and energy consumption to keep their devices running smoothly. Happy customers can enjoy peace of mind, knowing you're on top of their machine's performance. How will you use the time and costs you're saving?

¹ Only available on Samsung products which are compatible with this service and to the extent, the end-user has agreed to the terms and conditions of the service in the SmartThings app and consented to the privacy notice applicable. A separate Wi-Fi Kit may be required for the EHS unit. EHS Cloud does not constitute advice regarding installation, maintenance or other topics, and the information provided through EHS Cloud Service does not confer any right. A separate Wi-Fi Kit may be required for the ClimateHub Split and TDM Plus unit.

EHS Selection Software

Samsung EHS Selection Software is a free of charge, online selection aid for Samsung EHS products. Samsung EHS Selection Software is an advanced design automation program that helps you design your heating system more easily and precisely. You can select the most suitable heating system from the entire range of Samsung EHS products and design the system with its user-friendly interface. It helps to ensure that the system's design complies with Samsung's engineering guidelines.

The ability to calculate the heating load, power consumption, export reports, seasonal efficiency data, water pipe schematics, energy labels and Keymark product fiches and much more makes the EHS Selection Software a powerful tool for an installer, designer and end user.

How to access

1. Register

The EHS Selection Software is an open web-based platform. No registration process is required.
Visit ehs-tool.com

2. System selection

Select the type of EHS system most suitable to your purpose from EHS Mono, EHS Split or EHS TDM PLUS.

3. Design conditions

Input your design conditions, heating and cooling loads, DHW consumption.

EHS Selection software can also assist you in calculating heating and DHW loads for your project.

4. Product selection

Select the most suitable outdoor unit, indoor unit and accessories based on performance charts provided.

5. Report

Download the EHS Product selection report in PDF or share the link.

System Selection

Select the system configuration based on your requirement.

Select your configuration

Mono

No refrigerant work needed

- The Mono outdoor unit includes the hydronic system, making it easy to install and saving space.
- Maximum leaving water temperature is 65 °C down to 10°C ambient temperature.
- Compatible with the Samsung ClimateHub or a third party DHW tank.
- Refrigerant R32.

Split

Refrigerant work needed

- The Split outdoor unit is connected to an indoor hydronic unit.
- Maximum leaving water temperature is 65°C (R32) or 55°C (R410A) down to 10°C ambient temperature.
- Compatible with a third party DHW tank or the Samsung ClimateHub (R32).
- Refrigerant R32 (up to 9 kW), R410A (above 9 kW).

TDM PLUS

Refrigerant work needed, combination with Air-to-Air units

- TDM Plus combines Air-to-Water with Air-to-Air to provide heating and cooling, thus saving space as a single outdoor unit is required.
- Maximum leaving water temperature is 55 °C down to 10°C ambient temperature.
- Compatible with the Samsung ClimateHub or a third party DHW tank.
- Refrigerant R410A.

Samsung specialist design support

Bringing together technical expertise and practical experience in climate system design, Samsung provides a single point of contact for the design and management of cooling and heating installations in buildings. With assistance ranging from 3D visualisations with BIM support to CFD analysis to optimise indoor thermal conditions and BREEAM assessments to achieve the best environmental performance, Samsung's specialist engineers are ready to support you in making your project a success.

BIM support

Building Information Modelling (BIM) is an intelligent 3D model-based process for creating and managing information on the physical and functional characteristics of a building, across the project lifecycle and covering all parties involved, including the supply chain. BIM gives architects, engineers and construction professionals the insights and tools necessary to efficiently plan, design, construct and manage buildings and infrastructure.

To support you as one of our Climate Solutions partners, Samsung has developed a full range of BIM models. You can download these BIM files from the Partner Portal.

CFD analysis

Computational Fluid Dynamics (CFD) uses numerical analysis and data structures to analyse thermal conditions in buildings. It allows the virtual testing and optimisation of various climate system configurations in the context of occupant comfort, energy efficiency and running cost. Samsung can offer you specialist CFD support that includes analyses such as indoor temperature profiling, airflow distribution and sound simulation.

BREEAM advice

BREEAM (BRE¹ Environmental Assessment Method) is one of the most widely used environmental assessment methods and rating systems for buildings. It sets the standard for best practice in sustainable design and has become the de facto measure used to describe a

BREEAM[®]

building's environmental performance. Samsung's Accredited Professionals (APs) can support you in assessing the optimal installation for achieving a high certification score to match your green building programme.

¹ BRE (Building Research Establishment) is a leading, multidisciplinary building science centre based in the United Kingdom.

How to obtain support

1. BIM support

To download Samsung BIM models, go to the Technical Resources on partnerhub.samsung.com/climate¹. To request dedicated project design support from Samsung, please contact your Samsung representative.

2. CFD analysis

Obtain CFD analysis support from Samsung, please contact your Samsung representative. Certain conditions may apply, subject to the project.

3. BREEAM advice

Please contact your Samsung representative to request a BREEAM evaluation by one of Samsung's Accredited Professionals (APs).

¹ Google Chrome is the recommended web browser for using the Samsung Climate Solutions Partner Portal.

Samsung Climate Solutions Academy

Samsung Climate Solutions Academy is committed to providing engineers with the technical skills required to install a Samsung product efficiently, and to help relay necessary information to users. All courses are designed to provide attendees with the opportunity to develop both theoretical and practical knowledge of Samsung's vast range of equipment and solutions.

Available training modules

Essential courses

Basic commercial training

- The product line-up, accessories and available controls
- The unique features of Samsung products
- Installation considerations

Advanced courses

Technical training

- How to correctly install and configure a system
- Commissioning: common issues during commissioning and how to resolve any challenges
- Troubleshooting and fault-finding (by use of E-codes)
- Control logic
- Case studies

Advanced courses

Design training

- Understanding customers' needs and offering possible solutions
- DVM Pro 2.0 - Samsung's advanced design tool
- Case studies
- [EHS-tool.com](#) - Samsung's design software for EHS heat pumps

Note: the registration process for and availability of training courses may vary per country. Please contact your Samsung representative for more information.

How to register for training

1. Select

Go to partnerhub.samsung.com/climate and search the online event calendar to select the training course you want to attend.

2. Register

After identifying the training course you would like to attend, follow the registration process.

3. Participate

You will be trained by one of our specialised Master Trainers or Product Specialists in one of our training centres.

4. Get certified

After completing the training, you will receive a Certificate of Completion.

Hydraulic Schematics

A photograph of a modern interior space. In the foreground, there is a light-colored wooden floor. To the left, a concrete pillar is visible. In the center, a red tufted sofa sits on a wooden platform. To the right, a tall, modular bookshelf made of light wood and dark metal holds several books. The background shows a window with a view of greenery outside.
